GA-945GCM-S2
GA-945GCMX-S2

Intel® Core™ 2 Extreme dual-core / Core™ 2 Duo / Intel® Pentium® D / Pentium® 4 / Celeron® D LGA775 Processor Motherboard

User's Manual
Rev. 6602
12ME-945CMX2R-6602R

* The WEEE marking on the product indicates this product must not be disposed of with user's other household waste and must be handed over to a designated collection point for the recycling of waste electrical and electronic equipment!!

* The WEEE marking applies only in European Union's member states.

Notice
The written content provided with this product is the property of Gigabyte.
No part of this manual may be reproduced, copied, translated, or transmitted in any form or by any means without Gigabyte's prior written permission. Specifications and features are subject to change without prior notice.

Product Manual Classification
In order to assist in the use of this product, Gigabyte has categorized the user manual in the following:

- For detailed product information and specifications, please carefully read the "Product User Manual".

- For detailed information related to Gigabyte's unique features, please go to "Technology Guide" section on Gigabyte's website to read or download the information you need.

For more product details, please click onto Gigabyte's website at www.gigabyte.com.tw

Item Checklist

☑ IDE Cable x 1 and FDD Cable x 1
☑ SATA 3Gb/s Cable x 2
☑ I/O Shield

* The items listed above are for reference only, and are subject to change without notice.

---

Optional Accessories

- 2 Ports USB 2.0 Cable (Part Number: 12CR1-1UB030-51/R)
- 4 Ports USB 2.0 Cable (Part Number: 12CR1-1UB030-21/R)
- S/PDIF In and Out Cable (Part Number: 12CR1-1SPINO-11/R)
- SATA bracket (Part No. 12CF1-3SATPW-11R)
- COM Port Cable (Part Number: 12CF1-1CM001-31/12CF1-1CM001-12R)
GA-945GCMX-S2 Motherboard Layout
GA-945GCM-S2 Motherboard Layout
(Note 1) Enable use of a Core™ 2 CPU with 1333 MHz FSB through overclocking. You must install the FSB 1333 MHz Core™ 2 CPU with DDR2 533 (or above) memory module(s).

(Note 2) Use of a 1066/800 MHz FSB CPU is required if you wish to install DDR2 667 MHz memory.

① Only for GA-945GCMX-S2.
② Only for GA-945GC-S2.
Chapter 1 Hardware Installation

1-1 Considerations Prior to Installation

Preparing Your Computer

The motherboard contains numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Thus, prior to installation, please follow the instructions below:

1. Please turn off the computer and unplug its power cord.
2. When handling the motherboard, avoid touching any metal leads or connectors.
3. It is best to wear an electrostatic discharge (ESD) cuff when handling electronic components (CPU, RAM).
4. Prior to installing the electronic components, please have these items on top of an antistatic pad or within a electrostatic shielding container.
5. Please verify that the power supply is switched off before unplugging the power supply connector from the motherboard.

Installation Notices

1. Prior to installation, please do not remove the stickers on the motherboard. These stickers are required for warranty validation.
2. Prior to the installation of the motherboard or any hardware, please first carefully read the information in the provided manual.
3. Before using the product, please verify that all cables and power connectors are connected.
4. To prevent damage to the motherboard, please do not allow screws to come in contact with the motherboard circuit or its components.
5. Please make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
6. Please do not place the computer system on an uneven surface.
7. Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
8. If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

Instances of Non-Warranty

1. Damage due to natural disaster, accident or human cause.
2. Damage as a result of violating the conditions recommended in the user manual.
3. Damage due to improper installation.
4. Damage due to use of uncertified components.
5. Damage due to use exceeding the permitted parameters.
6. Product determined to be an unofficial Gigabyte product.
## 1-2 Feature Summary

**CPU**
- LGA775 for Intel® Core™ 2 Extreme dual-core / Core™ 2 Duo / Pentium® D / Pentium® 4 / Celeron® D
- L2 cache varies with CPU

**Front Side Bus**
- Supports 1333MHz/1066/800/533 MHz FSB

**Chipset**
- Northbridge: Intel® 945 Express Chipset
- Southbridge: Intel® ICH7

**LAN**
- Onboard RTL8110SC chip (10/100/1000 Mbit)

**Audio**
- Onboard Realtek ALC888 CODEC chip
- Supports High Definition Audio
- Supports 2 / 4 / 6 / 8 channel audio
- Supports S/PDIF In/Out connection
- Supports CD In connection

**Storage**
- Intel® ICH7 Southbridge
  - 1 FDD connector, allowing connection of 1 FDD device
  - 1 IDE connector with Ultra ATA-33/66/100 support, allowing connection of 2 IDE devices
  - 4 SATA 3Gb/s connectors, allowing connection of 4 SATA 3Gb/s devices

**O.S Support**
- Microsoft Windows® XP/Vista

**Memory**
- 2 DDRII DIMM memory slots (supports up to 4 GB memory) (Note 3)
- Supports dual channel DDRII 667/533 unbuffered DIMMs (Note 3)
- Supports 1.8V DDRII DIMMs

**Expansion Slots**
- 1 PCI Express x16 slot
- 1 PCI Express x4 slot
- 2 PCI slots
- 3 PCI slots

**Internal Connectors**
- 1 24-pin ATX power connector
- 1 4-pin ATX 12V power connector
- 1 floppy connector
- 1 IDE connector
- 4 SATA 3Gb/s connectors
- 1 CPU fan connector
- 1 system fan connector
- 1 front panel connector
- 1 front audio connector
- 1 CD In connector
- 1 S/PDIF In/Out connector
- 2 USB 2.0/1.1 connectors for additional 4 ports by cables
- 1 COMB connector
- 1 Chassis Intrusion connector
- 1 power LED connector

1. Only for GA-945GCMX-S2.
2. Only for GA-945GCM-S2.
Rear Panel I/O
- 1 PS/2 keyboard port
- 1 PS/2 mouse port
- 1 parallel port
- 1 serial port
- 1 D-Sub port
- 4 USB 2.0/1.1 ports
- 1 RJ-45 port
- 6 audio jacks (Line In / Line Out / MIC In/Surround Speaker Out (Rear Speaker Out)/Center/Subwoofer Speaker Out/Side Speaker Out)

I/O Control
- IT8718 chip

Hardware Monitor
- System voltage detection
- CPU temperature detection
- CPU / System fan speed detection
- CPU warning temperature
- CPU / System fan failure warning
- CPU smart fan control

BIOS
- 1 4 Mbit flash ROM
- Use of licensed AWARD BIOS
- PnP 1.0a, DMI 2.0, SM BIOS 2.3, ACPI 1.0b

Additional Features
- Supports @BIOS
- Supports Download Center
- Supports Q-Flash
- Supports EasyTune (only supports Hardware Monitor function) *(Note 4)*
- Supports Xpress Install
- Supports Xpress Recovery2
- Supports Xpress BIOS Rescue

Bundle Software
- Norton Internet Security (OEM revision)

Form Factor
- Micro ATX form factor; 22.0cm x 24.4cm

---

(Note 1) Enable use of a Core™ 2 CPU with 1333 MHz FSB through overclocking. You must install the FSB 1333 MHz Core™ 2 CPU with DDR2 533 (or above) memory module(s).

(Note 2) Due to Windows XP 32-bit operating system limitation, when more than 4 GB of physical memory is installed, the actual memory size displayed will be less than 4 GB.

(Note 3) Use of a 1066/800 MHz FSB CPU is required if you wish to install DDR2 667 MHz memory.

(Note 4) EasyTune functions may vary depending on different motherboards.
1-3 Installation of the CPU and CPU Cooler

Before installing the CPU, please comply with the following conditions:

1. Please make sure that the motherboard supports the CPU.
2. Please take note of the one indented corner of the CPU. If you install the CPU in the wrong direction, the CPU will not insert properly. If this occurs, please change the insert direction of the CPU.
3. Please add an even layer of heat sink paste between the CPU and CPU cooler.
4. Please make sure the CPU cooler is installed on the CPU prior to system use, otherwise overheating and permanent damage of the CPU may occur.
5. Please set the CPU host frequency in accordance with the processor specifications. It is not recommended that the system bus frequency be set beyond hardware specifications since it does not meet the required standards for the peripherals. If you wish to set the frequency beyond the proper specifications, please do so according to your hardware specifications including the CPU, graphics card, memory, hard drive, etc.

HT functionality requirement content:
Enabling the functionality of Hyper-Threading Technology for your computer system requires all of the following platform components:
- CPU: An Intel® Pentium 4 Processor with HT Technology
- Chipset: An Intel® Chipset that supports HT Technology
- BIOS: A BIOS that supports HT Technology and has it enabled
- OS: An operation system that has optimizations for HT Technology

1-3-1 Installation of the CPU

Fig. 1 Gently lift the metal lever located on the CPU socket to the upright position.

Fig. 2 Remove the plastic covering on the CPU socket.

Fig. 3 Notice the small gold colored triangle located on the edge of the CPU socket. Align the indented corner of the CPU with the triangle and gently insert the CPU into position. (Grasping the CPU firmly between your thumb and forefinger, carefully place it into the socket in a straight and downwards motion. Avoid twisting or bending motions that might cause damage to the CPU during installation.)

Fig. 4 Once the CPU is properly inserted, please replace the load plate and push the metal lever back into its original position.
1-3-2 Installation of the CPU Cooler

Please apply an even layer of CPU cooler paste on the surface of the installed CPU.

Fig. 1

Place the CPU cooler atop the CPU and make sure the push pins aim to the pin hole on the motherboard. Pressing down the push pins diagonally.

Fig. 3

Please make sure the Male and Female push pin are joined closely. (for detailed installation instructions, please refer to the CPU cooler installation section of the user manual)

Fig. 4

Finally, please attach the power connector of the CPU cooler to the CPU fan header located on the motherboard.

Fig. 6

Use extreme care when removing the CPU cooler because the thermal grease/tape between the CPU cooler and CPU may adhere to the CPU. Inadequately removing the CPU cooler may damage the CPU.

NOTE

(Turning the push pin along the direction of arrow is to remove the CPU cooler, on the contrary, is to install.) Please note the direction of arrow sign on the male push pin doesn't face inwards before installation. (This instruction is only for Intel boxed fan)
1-4 Installation of Memory

Before installing the memory modules, please comply with the following conditions:

1. Please make sure that the memory used is supported by the motherboard. It is recommended that memory of similar capacity, specifications and brand be used.

2. Before installing or removing memory modules, please make sure that the computer power is switched off to prevent hardware damage.

3. Memory modules have a foolproof insertion design. A memory module can be installed in only one direction. If you are unable to insert the module, please switch the direction.

The motherboard supports DDR2 memory modules, whereby BIOS will automatically detect memory capacity and specifications. Memory modules are designed so that they can be inserted only in one direction. The memory capacity used can differ with each slot.

Fig. 1
The DIMM socket has a notch, so the DIMM memory module can only fit in one direction. Insert the DIMM memory module vertically into the DIMM socket. Then push it down.

Fig. 2
Close the plastic clip at both edges of the DIMM sockets to lock the DIMM module. Reverse the installation steps when you wish to remove the DIMM module.
Dual Channel Memory Configuration

The GA-945GCMX-S2/GA-945GCM-S2 supports the Dual Channel Technology. After operating the Dual Channel Technology, the bandwidth of memory bus will double.

The GA-945GCMX-S2/GA-945GCM-S2 includes 2 DIMM sockets. If you want to operate the Dual Channel Technology, please note the following explanations due to the limitation of Intel chipset specifications.

1. Dual Channel mode will not be enabled if only one DDR2 memory module is installed.
2. When enabling Dual Channel mode with two memory modules, it is recommended that memory of the same capacity, brand, speed, and chips be used.
1-5 Installation of Expansion Cards

To install your expansion card, follow the steps below.

1. Disconnect your system from its power source and read the expansion card’s installation manual before installing the expansion card in the computer.
2. Remove your computer’s chassis cover, screws and slot bracket from the computer. Ground yourself to prevent damage to your computer resulting from Electrostatic discharge (ESD).
3. Press the expansion card firmly into the expansion slot in the motherboard.
4. Make sure the metal contacts on the card are fully seated in the slot.
5. Replace the screw to secure the slot bracket of the expansion card.
6. Replace your computer’s chassis cover.
7. Power on the computer, if necessary, configure required settings for the expansion card in system BIOS Setup.
8. Install related driver in the operating system.

For example: Installing a PCI Express x16 VGA card:

![Image of installing PCI Express x16 VGA card]

**CAUTION**

When installing the graphics card, push down on the top edge of the card until it is fully inserted into the PCI Express x16 slot. Make sure the card is securely seated in the slot and does not rock.

When removing the graphics card, gently push back on the lever on the slot and then lift the card straight out from the slot.
I/O Back Panel Introduction

- **PS/2 Keyboard and PS/2 Mouse Connector**
  To install a PS/2 port keyboard and mouse, plug the mouse to the upper port (green) and the keyboard to the lower port (purple).

- **Parallel Port**
  The parallel port allows connection of a printer, scanner and other peripheral devices.

- **Serial Port**
  Connects to serial-based mouse or data processing devices.

- **D-Sub Port**
  Monitor can be connected to VGA port.

- **USB Port**
  Before you connect your device(s) into USB connector(s), please make sure your device(s) such as USB keyboard, mouse, scanner, zip, speaker...etc. have a standard USB interface. Also make sure your OS supports USB controller. If your OS does not support USB controller, please contact OS vendor for possible patch or driver upgrade. For more information please contact your OS or device(s) vendors.

- **LAN Port**
  The provided Internet connection is Gigabit Ethernet, providing data transfer speeds of 10/100/1000 Mbps.

- **Center/Subwoofer Speaker Out**
  The default Center/Subwoofer Speaker Out jack. Center/Subwoofer speakers can be connected to Center/Subwoofer Speaker Out jack.

- **Surround Speaker Out (Rear Speaker Out)**
  The default Surround Speaker Out (Rear Speaker Out) jack. Rear surround speakers can be connected to Surround Speaker Out (Rear Speaker Out) jack.

- **Side Speaker Out**
  The default Side Speaker Out jack. Surround side speakers can be connected to Side Speaker Out jack.

- **Line In**
  The default Line In jack. Devices like CD-ROM, walkman etc. can be connected to Line In jack.

- **Line Out (Front Speaker Out)**
  The default Line Out (Front Speaker Out) jack. Stereo speakers, earphone or front surround speakers can be connected to Line Out (Front Speaker Out) jack.
MIC In
The default MIC In jack. Microphone must be connected to MIC In jack.

In addition to the default speakers settings, the audio jacks can be reconfigured to perform different functions via the audio software. Only microphones still MUST be connected to the default Mic In jack. Please refer to the 2-/4-/6-/8- channel audio setup steps for detailed software configuration information.

1-7 Connectors Introduction

| 1)   | 2)   | 3)   | 4)   | 5)   | 6)   | 7)   | 8)   | 9)   | 10)  | 11)  | 12)  | 13)  | 14)  | 15)  | 16)  | 17)  |

| ATX_12V | ATX (Power Connector) | CPU_FAN | SYS_FAN | FDD | IDE | SATAII0 / 1 / 2 / 3 | PWR_LED | BATTERY |       | F_PANEL |       | F_AUDIO |       | CD_IN |       | SPDIF_IO |   | COMB |   | CLR_CMOS |   | CI |   |
1/2) ATX_12V / ATX (Power Connector)

With the use of the power connector, the power supply can supply enough stable power to all the components on the motherboard. Before connecting the power connector, please make sure that all components and devices are properly installed. Align the power connector with its proper location on the motherboard and connect tightly.

The ATX_12V power connector mainly supplies power to the CPU. If the ATX_12V power connector is not connected, the system will not start.

Caution! Please use a power supply that is able to handle the system voltage requirements. It is recommended that a power supply that can withstand high power consumption be used (300W or greater). If a power supply is used that does not provide the required power, the result can lead to an unstable system or a system that is unable to start. If you use a power supply that provides a 24-pin ATX power connector, please remove the small cover on the power connector on the motherboard before plugging in the power cord; otherwise, please do not remove it.

3/4) CPU_FAN / SYS_FAN (Cooler Fan Power Connector)

The cooler fan power connector supplies a +12V power voltage via a 3-pin/4-pin (CPU_FAN) power connector and possesses a foolproof connection design. Most coolers are designed with color-coded power connector wires. A red power connector wire indicates a positive connection and requires a +12V power voltage. The black connector wire is the ground wire (GND).

Remember to connect the CPU/system fan cable to the CPU_FAN/SYS_FAN connector to prevent CPU damage or system hanging caused by overheating.

5) FDD (Floppy Connector)

The FDD connector is used to connect the FDD cable while the other end of the cable connects to the FDD drive. The types of FDD drives supported are: 360 KB, 720 KB, 1.2 MB, 1.44 MB and 2.88 MB. Before attaching the FDD cable, please take note of the foolproof groove in the FDD connector.
6) **IDE (IDE Connector)**

An IDE device connects to the computer via an IDE connector. One IDE connector can connect to one IDE cable, and the single IDE cable can then connect to two IDE devices (hard drive or optical drive). If you wish to connect two IDE devices, please set the jumper on one IDE device as Master and the other as Slave (for information on settings, please refer to the instructions located on the IDE device). Before attaching the IDE cable, please take note of the foolproof groove in the IDE connector.

![IDE Connector Diagram](image)

7) **SATAII0 / 1 / 2 / 3 (SATA 3Gb/s Connector, Controlled by ICH7)**

SATA 3Gb/s can provide up to 300 MB/s transfer rate. Please refer to the BIOS setting for the SATA 3Gb/s and install the proper driver in order to work properly.

9) **BATTERY**

- Danger of explosion if battery is incorrectly replaced.
- Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to the manufacturer's instructions.

If you want to erase CMOS...
1. Turn off the computer and unplug the power cord.
2. Gently take out the battery and put it aside for about one minute.
   (Or you can use a metal object to connect the positive and negative pins in the battery holder to make them short for five seconds.)
3. Re-install the battery.
4. Plug the power cord in and turn on the computer.
10) **F_PANEL (Front Panel Jumper)**

Please connect the power LED, PC speaker, reset switch and power switch etc. of your chassis front panel to the F PANEL connector according to the pin assignment below.

| **MSG (Message LED/Power/Sleep LED)** | Pin 1: LED anode(+)  
Pin 2: LED cathode(-) |
|-------------------------------|-------------------|
| **PW (Power Switch)**         | Open: Normal      
Close: Power On/Off |

Pin 2: Pin 3: NC  
Pin 4: Data(-) |
| **HD (IDE Hard Disk Active LED)** | Pin 1: LED anode(+)  
Pin 2: LED cathode(-) |
| **RES (Reset Switch)**        | Open: Normal      
Close: Reset Hardware System |
| **NC**                        | NC                |
11) **F_AUDIO (Front Audio Connector)**

This connector supports either HD (High Definition) or AC'97 front panel audio module. If you wish to use the front audio function, connect the front panel audio module to this connector. Check the pin assignments carefully while you connect the front panel audio module. Incorrect connection between the module and connector will make the audio device unable to work or even damage it. For optional front panel audio module, please contact your chassis manufacturer.

13) **SPDIF_IO (S/PDIF In/Out Connector)**

The S/PDIF output is capable of providing digital audio to external speakers or compressed AC3 data to an external Dolby Digital Decoder. Use this feature only when your stereo system has digital input function. Use S/PDIF IN feature only when your device has digital output function. Be careful with the polarity of the SPDIF_IO connector. Check the pin assignment carefully while you connect the S/PDIF cable, incorrect connection between the cable and connector will make the device unable to work or even damage it. For optional S/PDIF cable, please contact your local dealer.

14) **F_USB1 / F_USB2 (Front USB Connector)**

Be careful with the polarity of the front USB connector. Check the pin assignment carefully while you connect the front USB cable, incorrect connection between the cable and connector will make the device unable to work or even damage it. For optional front USB cable, please contact your local dealer.

16) CLR_CMOS (Clear CMOS)
You may clear the CMOS data to its default values by this header. To clear CMOS, temporarily short the two pins. Default doesn't include the jumper to avoid improper use of this header.
17) CI (Chassis Intrusion, Case Open)
This 2-pin connector allows your system to detect if the chassis cover is removed. You can check the "Case Opened" status in BIOS Setup.

Chapter 2 BIOS Setup

BIOS (Basic Input and Output System) includes a CMOS SETUP utility which allows user to configure required settings or to activate certain system features.

The CMOS SETUP saves the configuration in the CMOS SRAM of the motherboard.

When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS SRAM.

When the power is turned on, press the <Del> button during the BIOS POST (Power-On Self Test) will take you to the CMOS SETUP screen. You can enter the BIOS setup screen by pressing "Ctrl + F1".

If you wish to upgrade to a new BIOS, either GIGABYTE’s Q-Flash or @BIOS utility can be used.

Q-Flash allows the user to quickly and easily update or backup BIOS without entering the operating system.

@BIOS is a Windows-based utility that does not require users to boot to DOS before upgrading BIOS but directly download and update BIOS from the Internet.

Main Menu

The on-line description of the highlighted setup function is displayed at the bottom of the screen.

Status Page Setup Menu / Option Page Setup Menu

Press <F1> to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item. To exit the Help Window press <Esc>.

Because BIOS flashing is potentially risky, please do it with caution and avoid inadequate operation that may result in system malfunction.
1. If you don't find the settings you want, press "Ctrl+F1" to access advanced options.

2. Select the **Load Optimized Defaults** item in the BIOS Setup when somehow the system is not stable as usual. This action makes the system reset to the default settings for stability.

3. The BIOS Setup menus described in this chapter are for reference only and may differ from the exact settings for your motherboard.
- Standard CMOS Features
  This setup page includes all the items in standard compatible BIOS.

- Advanced BIOS Features
  This setup page includes all the items of Award special enhanced features.

- Integrated Peripherals
  This setup page includes all onboard peripherals.

- Power Management Setup
  This setup page includes all the items of Green function features.

- PnP/PCI Configuration
  This setup page includes all the configurations of PCI & PnP ISA resources.

- PC Health Status
  This setup page is the System auto detect Temperature, voltage, fan, speed.

- Frequency/Voltage Control
  This setup page is control CPU clock and frequency ratio.

- Load Fail-Safe Defaults
  Fail-Safe Defaults indicates the value of the system parameters which the system would be in safe configuration.

- Load Optimized Defaults
  Optimized Defaults indicates the value of the system parameters which the system would be in best performance configuration.

- Set Supervisor Password
  Change, set, or disable password. It allows you to limit access to the system and Setup, or just to Setup.

- Set User Password
  Change, set, or disable password. It allows you to limit access to the system.

- Save & Exit Setup
  Save CMOS value settings to CMOS and exit setup.

- Exit Without Saving
  Abandon all CMOS value changes and exit setup.
2-1 Standard CMOS Features

Date
The date format is <week>, <month>, <day>, <year>.
- **Week** The week, from Sun to Sat, determined by the BIOS and display-only
- **Month** The month, Jan. Through Dec.
- **Day** The day, from 1 to 31 (or the maximum allowed in the month)
- **Year** The year, from 2000 through 2099

Time
The times format in <hour> <minute> <second>. The time is calculated base on the 24-hour military-time clock. For example, 1 p.m. is 13:0:0.

IDE Channel 0 Master/Slave
- **IDE HDD Auto-Detection** Press "Enter" to select this option for automatic device detection.
- **IDE Channel 0 Master/Slave**
IDE devices setup. You can use one of three methods:
- **Auto** Allows BIOS to automatically detect IDE/SATA devices during POST. (Default value)
- **None** Select this if no IDE/SATA devices are used and the system will skip the automatic detection step and allow for faster system start up.
- **Manual** User can manually input the correct settings.
- **Access Mode** Use this to set the access mode for the hard drive. The four options are: CHS/LBA/Large/Auto (default: Auto)
- **Capacity** Capacity of currently installed hard drive.

IDE Channel 2, 3 Master/Slave
- **IDE HDD Auto-Detection** Press "Enter" to select this option for automatic device detection.
- **Extended IDE Drive** You can use one of the two methods:
  - **Auto** Allows BIOS to automatically detect IDE/SATA devices during POST (default)
  - **None** Select this if no IDE/SATA devices are used and the system will skip the automatic detection step and allow for faster system start up.
Access Mode
Use this to set the access mode for the hard drive. The two options are:
Large/Auto (default: Auto)

Capacity
Capacity of currently installed hard drive.

Hard drive information should be labeled on the outside drive casing. Enter the appropriate option based on this information.

- Cylinder
  Number of cylinders

- Head
  Number of heads

- Precomp
  Write precomp

- Landing Zone
  Landing zone

- Sector
  Number of sectors

Drive A
The category identifies the types of floppy disk drive A that has been installed in the computer.

- None
  No floppy drive installed

- 360K, 5.25"
  5.25 inch PC-type standard drive; 360 KB capacity.

- 1.2M, 5.25"
  5.25 inch AT-type high-density drive; 1.2 MB capacity (3.5 inch when 3 Mode is Enabled).

- 720K, 3.5"
  3.5 inch double-sided drive; 720 KB capacity

- 1.44M, 3.5"
  3.5 inch double-sided drive; 1.44 MB capacity.

- 2.88M, 3.5"
  3.5 inch double-sided drive; 2.88 MB capacity.

Floppy 3 Mode Support (for Japan Area)

- Disabled
  Normal Floppy Drive. (Default value)

- Drive A
  Drive A is 3 mode Floppy Drive.

Halt on
The category determines whether the computer will stop if an error is detected during power up.

- No Errors
  The system boot will not stop for any error that may be detected and you will be prompted.

- All Errors
  Whenever the BIOS detects a non-fatal error the system will be stopped.

- All, But Keyboard
  The system boot will not stop for a keyboard error; it will stop for all other errors. (Default value)

- All, But Diskette
  The system boot will not stop for a disk error; it will stop for all other errors.

- All, But Disk/Key
  The system boot will not stop for a keyboard or disk error; it will stop for all other errors.

Memory
The category is display-only which is determined by POST (Power On Self Test) of the BIOS.

Base Memory
The POST of the BIOS will determine the amount of base (or conventional) memory installed in the system.
The value of the base memory is typically 512 K for systems with 512 K memory installed on the motherboard, or 640 K for systems with 640 K or more memory installed on the motherboard.

Extended Memory
The BIOS determines how much extended memory is present during the POST.
This is the amount of memory located above 1 MB in the CPU's memory address map.
2-2 Advanced BIOS Features

CMOS Setup Utility - Copyright (C) 1984-2007 Award Software
Advanced BIOS Features

- Hard Disk Boot Priority
  - First Boot Device
  - Second Boot Device
  - Third Boot Device
  - Password Check
  - HDD S.M.A.R.T. Capability
  - Limit CPUID Max. to 3 (Note)
  - No-Execute Memory Protect (Note)
  - Init Display First®
  - On-Chip Frame Buffer Size
  - CPU Hyper-Threading (Note)
  - CPU Enhanced Halt (C1E) (Note)
  - CPU Thermal Monitor 2(TM2) (Note)
  - CPU EIST Function (Note)
  - Virtualization Technology (Note)

- Password Check
  - System
  - Setup

(Note) This item will show up when you install a processor which supports this function.

① Only for GA-945GCMX-S2.
HDD S.M.A.R.T. Capability
This feature allows your hard disk to report read/write errors and to issue warnings when third-party hardware monitor utility is installed.
» Disabled Disable HDD S.M.A.R.T. capability. (Default value)

Limit CPUID Max. to 3 (Note)
» Enabled Limit CPUID Maximum value to 3 when use older OS like NT4.
» Disabled Disable CPUID Limit for windows XP. (Default value)

No-Execute Memory Protect (Note)
» Enabled Enable No-Execute Memory Protect function. (Default value)
» Disabled Disable No-Execute Memory Protect function.

Init Display First
Specifies the first initiation of the monitor display from the installed PCI graphics card, PCI Express graphics card, or the onboard VGA.
» PCI Set Init display first to PCI. (Default value)
» Onboard Set Init Display First to onboard VGA.
» PEG Set Init display first to PCI Express x16 VGA card.
» PEG2 Set Init display first to PCI Express x4 VGA card.

On-Chip Frame Buffer Size
» 1MB Set on-chip frame buffer size to 1 MB.
» 8MB Set on-chip frame buffer size to 8 MB. (Default value)

CPU Hyper-Threading (Note)
» Enabled Enable CPU Hyper Threading Feature. Please note that this feature is only working for operating system with multi processors mode supported. (Default value)
» Disabled Disable CPU Hyper Threading.

CPU Enhanced Halt (C1E) (Note)
» Enabled Enable CPU Enhanced Halt (C1E) function. (Default value)
» Disabled Disable CPU Enhanced Halt (C1E) function.

CPU Thermal Monitor 2 (TM2) (Note)
» Enabled Enable CPU Thermal Monitor 2 (TM2) function. (Default value)
» Disabled Disable CPU Thermal Monitor 2 (TM2) function.

CPU EIST Function (Note)
» Enabled Enable CPU EIST function. (Default value)
» Disabled Disable EIST function.

Virtualization Technology (Note)
» Enabled Enable Virtualization technology function. (Default value)
» Disabled Disable this function.

(Note) This item will show up when you install a processor which supports this function.
① Only for GA-945GCMX-S2.

Menu Level

On-Chip Primary PCI IDE

- **Enabled**: Enable onboard 1st channel IDE port. (Default value)
- **Disabled**: Disable onboard 1st channel IDE port.

On-Chip SATA Mode

- **Disabled**: Disable this function.
- **Auto**: BIOS will auto detect. (Default value)
- **Combined**: Set On-Chip SATA mode to Combined, you can use up to 4 HDDs on the motherboard; 2 for SATA and the other for PATA.
- **Enhanced**: Set On-Chip SATA mode to Enhanced, the motherboard allows up to 6 HDDs to use; 4 for SATA and the other for PATA.
- **Non-Combined**: Set On-Chip SATA mode to Non-Combined, SATA will be simulated to PATA mode. Support a maximum of 4 SATA devices. PATA devices will be ignored.

PATA IDE Set to

- **Ch.0 Master/Slave**: Set PATA IDE to Ch. 0 Master/Slave. (Default value)
- **Ch.1 Master/Slave**: Set PATA IDE to Ch. 1 Master/Slave.

SATA Port 0/2 Set to

- This value will auto make by the setting "On-Chip SATA Mode" and "PATA IDE Set to".
  If PATA IDE were set to Ch. 1 Master/Slave, this function will auto set to Ch. 0 Master/Slave.

SATA Port 1/3 Set to

- This value will auto make by the setting "On-Chip SATA Mode" and "PATA IDE Set to".
  If PATA IDE were set to Ch. 0 Master/Slave, this function will auto set to Ch. 1 Master/Slave.

USB Controller

- **Enabled**: Enable USB controller. (Default value)
- **Disabled**: Disable USB controller.
USB 2.0 Controller
You can disable this function if you are not using onboard USB 2.0 feature.
- Enabled: Enable USB 2.0 controller. (Default value)
- Disabled: Disable USB 2.0 controller.

USB Keyboard Support
- Enabled: Enable USB keyboard support.
- Disabled: Disable USB keyboard support. (Default value)

USB Mouse Support
- Enabled: Enable USB mouse support.
- Disabled: Disable USB mouse support. (Default value)

Legacy USB storage detect
This option allows users to decide whether to detect USB storage devices, including USB flash drives and USB hard drives during POST.
- Enabled: BIOS will scan all USB storage devices. (Default value)
- Disabled: Disable this function.

Azalia Codec
- Auto: Auto detect Azalia audio function. (Default value)
- Disabled: Disable Azalia audio function.

Onboard H/W LAN
- Enabled: Enable onboard H/W LAN function. (Default value)
- Disabled: Disable this function.
SMART LAN (LAN Cable Diagnostic Function)

This motherboard incorporates cable diagnostic feature designed to detect the status of the attached LAN cable. This feature will detect cabling issue and report the approximate distance to the fault or short. Refer to the following information for diagnosing your LAN cable:

- **When No LAN Cable Is Attached...**
  If no LAN cable is attached to the motherboard, the Status fields of all four pairs of wires will show Open and the Length fields show 0.0m, as shown in the figure above.

- **When LAN Cable Is Functioning Normally...**
  If no cable problem is detected on the LAN cable connected to a Gigabit hub or a 10/100 Mbps hub, the following message will appear:

  ![Smart LAN Diagram](image)

  - Link Detected Displays transmission speed
  - Cable Length Displays the approximate length of the attached LAN cable

  Note: The Gigabit hub will only operate at a speed of 10/100 Mbps in MS-DOS mode; it will operate at a normal speed of 10/100/1000 Mbps in Windows mode or when the LAN Boot ROM is activated.

- **When a Cable Problem Occurs...**
  If a cable problem occurs on a specified pair of wires, the Status field will show Short and the length shown will be the approximate distance to the fault or short.

  **Example:**

  Pair 1-2 Status = Short / Length = 1.6m

  Explanation: A fault or short might occur at about 1.6m on Pair 1-2.

  Note: Pair 4-5 and Pair 7-8 are not used in a 10/100 Mbps environment, their Status fields will show Open, and the length shown is the approximate length of the attached LAN cable.
Onboard LAN Boot ROM
This function decides whether to invoke the boot ROM of the onboard LAN chip.
- Enabled: Enable this function.
- Disabled: Disable this function. (Default value)

Onboard Serial Port 1
- Auto: BIOS will automatically setup the port 1 address.
- 3F8/IRQ4: Enable onboard Serial port 1 and address is 3F8/IRQ4. (Default value)
- 2F8/IRQ3: Enable onboard Serial port 1 and address is 2F8/IRQ3.
- 3E8/IRQ4: Enable onboard Serial port 1 and address is 3E8/IRQ4.
- 2E8/IRQ3: Enable onboard Serial port 1 and address is 2E8/IRQ3.
- Disabled: Disable onboard Serial port 1.

Onboard Serial Port 2
- Auto: BIOS will automatically setup the port 2 address.
- 3F8/IRQ4: Enable onboard Serial port 2 and address is 3F8/IRQ4.
- 2F8/IRQ3: Enable onboard Serial port 2 and address is 2F8/IRQ3. (Default value)
- 3E8/IRQ4: Enable onboard Serial port 2 and address is 3E8/IRQ4.
- 2E8/IRQ3: Enable onboard Serial port 2 and address is 2E8/IRQ3.
- Disabled: Disable onboard Serial port 2.

Onboard Parallel Port
- Disabled: Disable onboard LPT port.
- 378/IRQ7: Enable onboard LPT port and address is 378/IRQ7. (Default value)
- 278/IRQ5: Enable onboard LPT port and address is 278/IRQ5.
- 3BC/IRQ7: Enable onboard LPT port and address is 3BC/IRQ7.

Parallel Port Mode
- SPP: Using Parallel port as Standard Parallel Port. (Default value)
- EPP: Using Parallel port as Enhanced Parallel Port.
- ECP: Using Parallel port as Extended Capabilities Port.
- ECP+EPP: Using Parallel port as ECP & EPP mode.

ECP Mode Use DMA
This item will be available when "Parallel Port Mode" set to "ECP" or "ECP+EPP".
- 3: Set ECP Mode Use DMA to 3. (Default value)
- 1: Set ECP Mode Use DMA to 1.
### 2-4 Power Management Setup

#### ACPI Suspend Type
- **S1(POS)**: Set ACPI suspend type to S1/POS (Power On Suspend). (Default value)
- **S3(STR)**: Set ACPI suspend type to S3/STR (Suspend To RAM).

#### Soft-Off by PWR-BTTN
- **Instant-Off**: Press power button then Power off instantly. (Default value)
- **Delay 4 Sec.**: Press power button 4 sec. to Power off. Enter suspend if button is pressed less than 4 sec.

#### PME Event Wake Up
This feature requires an ATX power supply that provides at least 1A on the 5VSB lead.
- **Disabled**: Disable this function.
- **Enabled**: Enable PME as wake up event. (Default value)

#### Power On by Ring
- **Disabled**: Disable Power on by Ring function.
- **Enabled**: Enable Power on by Ring function. (Default value)

#### Resume by Alarm
You can set "Resume by Alarm" item to Enabled and key in Date/Time to power on system.
- **Disabled**: Disable this function. (Default value)
- **Enabled**: Enable alarm function to POWER ON system.
If Resume by Alarm is Enabled.
- **Date (of Month) Alarm**: Everyday, 1~31
- **Time (hh: mm: ss) Alarm**: (0~23) : (0~59) : (0~59)

#### Power On By Mouse
- **Disabled**: Disable this function. (Default value)
- **Double Click**: Double click on PS/2 mouse left button to power on the system.
Power On By Keyboard
- Disabled: Disable this function. (Default value)
- Password: Enter from 1 to 5 characters to set the keyboard power on password.
- Keyboard 98: If your keyboard have "POWER Key" button, you can press the key to power on the system.

KB Power ON Password
When "Power On by Keyboard" set at Password, you can set the password here.
- Enter: Input password(from 1 to 5 characters) and press Enter to set the password.

AC BACK Function
- Soft-Off: When AC-power back to the system, the system will be in "Off" state. (Default value)
- Full-On: When AC-power back to the system, the system always in "On" state.
- Memory: When AC-power back to the system, the system will return to the Last state before AC-power off.
### 2-5 PnP/PCI Configurations

</table>

- ▼ Reset Case Open Status
  - Disabled: Don't reset case open status. (Default value)
  - Enabled: Clear case open status at next boot.

- ▼ Case Opened
  - If the case is closed, "Case Opened" will show "No".
  - If the case have been opened, "Case Opened" will show "Yes".
  - If you want to reset "Case Opened" value, set "Reset Case Open Status" to "Enabled" and save CMOS, your computer will restart.

- ▼ Current Voltage(V) Vcore / DDR18V / +3.3V / +12V
  - Detect system's voltage status automatically.

- ▼ Current CPU Temperature
  - Detect CPU temperature automatically.

- ▼ Current CPU/SYSTEM FAN Speed (RPM)
  - Detect CPU/system fan speed status automatically.

- ▼ CPU Warning Temperature
  - 60°C / 140°F: Monitor CPU temperature at 60°C / 140°F.
  - 70°C / 158°F: Monitor CPU temperature at 70°C / 158°F.
  - 80°C / 176°F: Monitor CPU temperature at 80°C / 176°F.
  - 90°C / 194°F: Monitor CPU temperature at 90°C / 194°F.
  - Disabled: Disable this function. (Default value)

- ▼ CPU/System FAN Fail Warning
  - Disabled: Disable the fan fail warning function. (Default value)
  - Enabled: Enable the fan fail warning function.
CPU Smart FAN Control
- Disabled: Disable this function.
- Enabled: When this function is enabled, CPU fan will run at different speed depending on CPU temperature. Users can adjust the fan speed with Easy Tune based on their requirements. (Default value)

CPU Smart FAN Mode
This option is available only when CPU Smart FAN Control is enabled.
- Auto: BIOS autodetects the type of CPU fan you installed and sets the optimal CPU Smart FAN control mode for it. (Default value)
- Voltage: Set to Voltage when you use a CPU fan with a 3-pin fan power cable.
- PWM: Set to PWM when you use a CPU fan with a 4-pin fan power cable.

Note: In fact, the Voltage option can be used for CPU fans with 3-pin or 4-pin power cables. However, some 4-pin CPU fan power cables are not designed following Intel 4-Wire fans PWM control specifications. With such CPU fans, selecting PWM will not effectively reduce the fan speed.
2-7 Frequency/Voltage Control

Incorrectly using these features may result in system instability or corruption. Doing an overclock or overvoltage on CPU, chipsets and memory modules may result in damages or shortened life expectancy to these components. Please be aware that the menu items are for power users only.

CPU Clock Ratio (Note)

This setup option will automatically assign by CPU detection.

The option will display "Locked" and read only if the CPU ratio is not changeable.

O.C FSB1333 Core 2 CPU

Enable use of a Core™ 2 CPU with 1333 MHz FSB through overclocking. You must install the FSB 1333 MHz Core™ 2 CPU with DDR2 533 (or above) memory module(s).

Disabled Disable this function. (Default value)

Enabled Enable this function.

CPU Host Clock Control

Please note that if your system is overclocked and cannot restart, please wait 20secs.

for automatic system restart or clear the CMOS setup data and perform a safe restart.

Disabled Disable CPU Host Clock Control. (Default value)

Enabled Enable CPU Host Clock Control.

CPU Host Frequency (Mhz)

100 ~ 600 Set CPU Host Frequency from 100 MHz to 600 MHz.

If you use a 533 MHz FSB processor, set "CPU Host Frequency" to 133 MHz.

If you use a 800 MHz FSB processor, set "CPU Host Frequency" to 200 MHz.

If you use a 1066 MHz FSB processor, set "CPU Host Frequency" to 266 MHz.

If you use a 1333 MHz FSB processor, set "CPU Host Frequency" to 333 MHz.

Incorrect using it may cause your system broken. For power End-User use only!

(Note) This item will show up when you install a processor which supports this function.

Only for GA-945GCMX-S2.
PCI Express Frequency (Mhz)

- **Auto**: Set PCI Express frequency automatically. (Default value)
- **SYC**: Set PCI Express frequency to SYC.
- **ASYC**: Set PCI Express frequency to ASYC.

System Memory Multiplier

The adjustable range will vary based on the CPU FSB. Default value: Auto (set memory frequency by DRAM SPD data). Wrong frequency settings may cause system unable to boot. Clear CMOS to overcome wrong frequency issue.

Memory Frequency (Mhz)

The values depend on **CPU Host Frequency (Mhz)** and **System Memory Multiplier** setting.

DIMM OverVoltage Control

Please note that by overclocking your system through the increase of the DIMM voltage, damage to the memory may occur.

- **Normal**: Supply DDR2 voltage as DDR2 requires. (Default value)
- **+0.1V ~ +0.4V**: Increase DDR2 voltage by 0.1V to 0.4V.

Incorrect using it may cause your system broken. For power End-User use only!

FSB OverVoltage Control

- **Normal**: Supply FSB voltage as FSB requires. (Default value)
- **+0.1V ~ +0.3V**: Increase FSB voltage by 0.1V to 0.3V.

CPU Voltage Control

- **Normal**: Supports adjustable CPU Vcore. The adjustable range is dependent on CPUs. (Default value: Normal)

Please note that by overclocking your system through the increase of the CPU voltage, damage to the CPU or decrease in the CPU life expectancy may occur.

Normal CPU Vcore

Display your CPU vcore voltage.

Only for GA-945GCMX-S2.
2-8  Load Fail-Safe Defaults

Fail-Safe defaults contain the most appropriate values of the system parameters that allow minimum system performance.

2-9  Load Optimized Defaults

Selecting this field loads the factory defaults for BIOS and Chipset Features which the system automatically detects.
2-10 Set Supervisor/User Password

When you select this function, the following message will appear at the center of the screen to assist you in creating a password.
Type the password, up to eight characters, and press <Enter>. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password.
To disable password, just press <Enter> when you are prompted to enter password. A message "PASSWORD DISABLED" will appear to confirm the password being disabled. Once the password is disabled, the system will boot and you can enter Setup freely.
The BIOS Setup program allows you to specify two separate passwords: SUPERVISOR PASSWORD and a USER PASSWORD. When disabled, anyone may access all BIOS Setup program function. When enabled, the Supervisor password is required for entering the BIOS Setup program and having full configuration fields, the User password is required to access only basic items.
If you select "System" at "Password Check" in Advance BIOS Features Menu, you will be prompted for the password every time the system is rebooted or any time you try to enter Setup Menu.
If you select "Setup" at "Password Check" in Advance BIOS Features Menu, you will be prompted only when you try to enter Setup.
2-11  Save & Exit Setup

Type "Y" will quit the Setup Utility and save the user setup value to RTC CMOS.
Type "N" will return to Setup Utility.

2-12  Exit Without Saving

Type "Y" will quit the Setup Utility without saving to RTC CMOS.
Type "N" will return to Setup Utility.
Chapter 3 Install Drivers

Pictures below are shown in Windows XP.
Insert the driver CD-title that came with your motherboard into your CD-ROM drive, the driver CD-title will auto start and show the installation guide. If not, please double click the CD-ROM device icon in "My computer", and execute the Run.exe.

3-1 Install Chipset Drivers

"Xpress Install " is now analyzing your computer...99%

After insert the driver CD, "Xpress Install" will scan automatically the system and then list all the drivers that recommended to install. Please pick the item that you want and press "install" followed the item; or you can press "Xpress Install" to install all items defaulted.

• Please ignore the popup dialog box(es) (e.g. the Found New Hardware Wizard) displayed when "Xpress Install" is installing the drivers. Failure to do so may affect the driver installation.
• Some device drivers will restart your system automatically during the driver installation. After the system restart, "Xpress Install" will continue to install other drivers.
• After the drivers are installed, follow the onscreen instructions to restart your system. You can install other applications included in the motherboard driver disk.
• For USB 2.0 driver support under the Windows XP operating system, please install the Windows XP Service Pack 1 or later. After installing the SP1 (or later), if a question mark still exists in Universal Serial Bus Controller in Device Manager, please remove the question mark (by right-clicking your mouse and select Uninstall) and restart the system. (The system will then autodetect and install the USB 2.0 driver.)
3-2 Software Applications

This page displays all the tools that Gigabyte developed and some free software, you can choose anyone you want and press "install" to install them.

3-3 Driver CD Information

This page lists the contents of software and drivers in this CD-title.
3-4 Hardware Information

This page lists all devices you have for this motherboard.

3-5 Contact Us

Please see the last page for details.
Chapter 4 Appendix

4-1 Unique Software Utilities
(Not all model support these Unique Software Utilities, please check your MB features.)

4-1-1 EasyTune 5 Introduction

EasyTune 5 presents the most convenient Windows based system performance enhancement and manageability utility. Featuring several powerful yet easy to use tools such as 1) Overclocking for enhancing system performance, 2) C.I.A. and M.I.B. for special enhancement for CPU and Memory, 3) Smart-Fan control for managing fan speed control of both CPU cooling fan and North-Bridge Chipset cooling fan, 4) PC health for monitoring system status.

User Interface Overview

<table>

(Note) EasyTune 5 functions may vary depending on different motherboards.
4-1-2 Xpress Recovery2 Introduction

Xpress Recovery2 is designed to provide quick backup and restoration of hard disk data. Supporting Microsoft operating systems including Windows XP/2000/NT/98/Me and DOS, and file systems including FAT16, FAT32, and NTFS, Xpress Recovery2 is able to back up data on hard disks on PATA and SATA IDE controllers. After Xpress Recovery2 is executed from CD-ROM for the first time, it will stay permanent in your hard disk. If you wish to run Xpress Recovery2 later, you can simply press F9 during system bootup to enter Xpress Recovery2 without the CD-ROM.

System requirements:
1. Intel x86 platforms
2. At least 64M bytes of system memory
3. VESA-supported VGA cards

How to use the Xpress Recovery2

Initial access by booting from CD-ROM and subsequent access by pressing the F9 key:

Steps: After entering BIOS Setup, go to Advanced BIOS Feature and set to boot from CD-ROM. Save the settings and exit the BIOS Setup. Insert the provided driver CD into your CD-ROM drive. Upon system restart, the message which says "Boot from CD/DVD:" will appear in the bottom left corner of the screen. Press any key to enter Xpress Recovery2.

After the steps above are completed, subsequent access to Xpress Recovery2 can be made by simply pressing the <F9> key during system power-on.

1. If you have already entered Xpress Recovery2 by booting from the CD-ROM, you can enter Xpress Recovery2 by pressing the <F9> key in the future.
2. System storage capacity and the reading/writing speed of the hard disk will affect the data backup speed.
3. It is recommended that Xpress Recovery2 be immediately installed once you complete installations of OS and all required drivers as well as software.
The Main Screen of Xpress Recovery2

1. **RESTORE:**
   Restore the backed-up data to your hard disk.
   (This button will not appear if there is no backup file.)

2. **BACKUP:**
   Back up data from hard disk.

3. **REMOVE:**
   Remove previously-created backup files to release disk space.
   (This button will not appear if there is no backup file.)

4. **REBOOT:**
   Exit the main screen and restart the system.

**Limitations:**
1. Not compatible to Xpress Recovery.
2. For the use of Xpress Recovery2, a primary partition must be reserved.
3. Xpress Recovery2 will store the backup file at the end of the hard disk, so free space available on the hard disk for the backup file must be allocated in advance. (A minimum 4GB is recommended but the actual space is dependent on the size of the data to be backed up)
4. Capable of backing up hard disks installed with Windows operating systems including DOS and Windows XP/2000/NT/9x/Me.
5. USB hard disks are currently not supported.
6. Does not support RAID/AHCI (class code 0104/0106) hard disks.
7. Capable of backing up and restoring only the first physical hard disk.

**Hard disks detection sequence is as follows:**
   a. PATA IDE primary channel
   b. PATA IDE secondary channel
   c. SATA IDE channel 1
   d. SATA IDE channel 2
   e. SATA IDE channel 3
   f. SATA IDE channel 4

**Precautions:**
1. When using hard disks with more than 128 G under Windows 2000, be sure to execute the EnableBigLba.exe program from the driver CD before data backup.
2. It is normal that data backup takes longer time than data restoration.
3. Xpress Recovery2 is compliant with the GPL regulations.
4. On a few motherboards based on Nvidia chipsets, BIOS update is required for Xpress Recovery2 to correctly identify RAID and SATA IDE mode. Please contact your motherboard manufacturer.
4-1-3 Flash BIOS Method Introduction

**Method 1 : Q-Flash™**

Q-Flash™ is a BIOS update tool that allows the user to update BIOS without entering operating systems like MS-DOS or Windows. Embedded in the BIOS, the Q-Flash™ tool frees you from the hassles of going through complicated BIOS flashing process.

**Before Use:**

Follow the steps below before using Q-Flash to update BIOS:

1. From GIGABYTE's website, download the latest compressed BIOS update file that matches your motherboard model.
2. Extract the downloaded BIOS files and save the new BIOS file (e.g. 9gcmxs2.F1) to your floppy disk or hard disk. Note: Q-Flash only supports hard disks or flash drives using FAT32/16/12 file system.
3. Restart the system. During BIOS POST, press the End key to enter Q-Flash. NOTE: Press the End key to enter Q-Flash if you wish to use hard drives in RAID/AHCI mode or hard drives attached to the independent IDE/SATA controller.

**Step 1:**

a. In the Q-Flash menu, use the UP or DOWN ARROW key to select **Update BIOS from Drive** and press ENTER.

If you wish to back up the current BIOS file, use the **Save BIOS to Drive** function.

b. Select the floppy drive or hard drive where the BIOS file is saved, such as "Floppy A" and press ENTER.

Because BIOS flashing is potentially risky, please do it with caution and avoid inadequate operation that may result in system malfunction.

**Updating the BIOS**

**Step 1:**

a. In the Q-Flash menu, use the UP or DOWN ARROW key to select **Update BIOS from Drive** and press ENTER.

If you wish to back up the current BIOS file, use the **Save BIOS to Drive** function.

b. Select the floppy drive or hard drive where the BIOS file is saved, such as "Floppy A" and press ENTER.

---

**GA-945GCM(X)-S2 Motherboard - 60 -**
Step 2: The process of system reading the BIOS file from the floppy disk is displayed on the screen. When the message "Are you sure to update BIOS?" appears, press ENTER. The BIOS update will begin and the current process will be displayed.

1. Do not turn off or restart the system when the system is reading/updating the BIOS.
2. Do not remove the floppy disk or hard drive/USB drive when the system is updating the BIOS.

Step 3: When the update process is complete, press any key to return to the Q-Flash main menu.

Step 4: Press ESC and then ENTER to exit Q-Flash and the system will restart. As the system reboots, you will see the new BIOS version during POST.

Step 5: As the system reboots, press DELETE to enter BIOS Setup. Select **Load Optimized Defaults** and press ENTER to load BIOS defaults. System will re-detect all peripherals devices after BIOS update, so we recommend that you reload BIOS defaults.

Step 6: Select **Save & Exit Setup** and then press Y to save settings to CMOS and exit BIOS Setup. When the system restarts, the whole update process is complete.
Method 2: @BIOS™ Utility

If you do not have a DOS startup disk, we recommend that you use the new @BIOS utility. @BIOS allows users to update their BIOS under Windows. Just select the desired @BIOS server to download the latest version of BIOS.

1. Methods and steps:

   I. Update BIOS through Internet
      a. Click "Internet Update" icon
      b. Click "Update New BIOS" icon
      c. Select @BIOS™ sever
      d. Select the exact model name on your motherboard
      e. System will automatically download and update the BIOS.

   II. Update BIOS NOT through Internet:
      a. Do not click "Internet Update" icon
      b. Click "Update New BIOS"
      c. Please select "All Files" in dialog box while opening the old file.
      d. Please search for BIOS unzip file, downloading from internet or any other methods (such as: 9gcmxs2.F1).
      e. Complete update process following the instruction.
III. Save BIOS
In the very beginning, there is "Save Current BIOS" icon shown in dialog box. It means to save the current BIOS version.

IV. Check out supported motherboard and Flash ROM:
In the very beginning, there is "About this program" icon shown in dialog box. It can help you check out which kind of motherboard and which brand of Flash ROM are supported.

2. Note:
   I. In method I, if it shows two or more motherboard's model names to be selected, please make sure your motherboard's model name again. Selecting wrong model name will cause the system unbooted.
   II. In method II, be sure that motherboard's model name in BIOS unzip file are the same as your motherboard's. Otherwise, your system won't boot.
   III. In method I, if the BIOS file you need cannot be found in @BIOS™ server, please go onto Gigabyte's web site for downloading and updating it according to method II.
   IV. Please note that any interruption during updating will cause system unbooted.
   V. Do not use @BIOS and C.O.M. (Corporate Online Management) at the same time.
4-1-4 2- / 4- / 6- / 8- Channel Audio Function

Introduction

The default speaker settings for the 6 audio jacks are as shown in the picture to the right. The jack retasking capability supported by HD Audio allows users to change the function for each audio jack by the audio software provided. For example, if a rear speaker is plugged into the center/subwoofer speaker out jack, you can change the center/subwoofer speaker out jack to function as a rear speaker out jack via the audio software. Please follow the steps to install the function. (Following pictures are in Windows XP)

Note that if you wish to connect a microphone, you MUST connect it to the default Mic In jack for the microphone to work correctly.

HD Audio

With multiple built-in high quality digital-to-analog converters (DACs) that support audio output at up to 192 kHz/24-bit quality and multi-streaming applications, HD Audio is able to handle multiple audio streams (in and out) simultaneously. Multi-channel audio experiences have become a reality so you can, for instance, listen to MP3 music, have an Internet chat, make a telephone call over the Internet, and etc. all at the same time.

Stereo Speakers Connection and Settings:
We recommend that you use the speaker with amplifier to acquire the best sound effect if the stereo output is applied.

STEP 1:
After installation of the audio driver, you should find an Audio Manager icon in your system tray (you can also find the icon in Control Panel). Double-click the icon to open the Audio Control Panel.
STEP 2:
In the Audio Control Panel, click the Audio I/O tab. 
In the upper left list, click 2CH Speaker.

STEP 3:
Connect a speaker or headphone to the rear Line Out jack, a small window will pop up and ask you what type of equipment is connected. Choose Headphone or Line Out depending on the device connected and click OK. The 2-channel audio setup is completed.

Setting Up 4-Channel Audio

STEP 1:
After installation of the audio driver, you should find an Audio Manager icon in your system tray (you can also find the icon in Control Panel). Double-click the icon to open the Audio Control Panel.
STEP 3:
Connect the 4-channel speakers to the audio jacks on the motherboard and the surround cable, a small window will pop up and ask you what type of equipment is connected. Choose a device depending on the type of speaker connected (4-channel audio consists of Front Speaker Out (Line Out) and Rear Speaker Out) and then click **OK**. The 4-channel audio setup is completed.

### Setting Up 6-Channel Audio

STEP 1:
After installation of the audio driver, you should find an Audio Manager icon in your system tray (you can also find the icon in Control Panel). Double-click the icon to open the Audio Control Panel.
STEP 2:
In the Audio Control Panel, click the **Audio I/O** tab. In the upper left list, click **6CH Speaker**.

![Image of Audio Control Panel](image)

STEP 3:
Connect the 6-channel speakers to the audio jacks on the motherboard and the surround cable, a small window will pop up and ask you what type of equipment is connected. Choose a device depending on the type of speaker connected (6-channel audio consists of Front Speaker Out (Line Out), Rear Speaker Out, and Center/Subwoofer Speaker Out) then click **OK**. The 6-channel audio setup is completed.

![Image of Audio Control Panel](image)

**Setting Up 8-Channel Audio**

STEP 1:
After installation of the audio driver, you should find an Audio Manager icon in your system tray (you can also find the icon in Control Panel). Double-click the icon to open the Audio Control Panel.

![Image of Audio Control Panel](image)
STEP 2:
In the Audio Control Panel, click the **Audio I/O** tab. In the upper left list, click **8CH Speaker**.

STEP 3:
Connect the 8-channel speakers to the audio jacks on the motherboard and the surround cable, a small window will pop up and ask you what type of equipment is connected. Choose a device depending on the type of speaker connected (8-channel audio consists of Front Speaker Out (Line Out), Rear Speaker Out, Center/Subwoofer Speaker Out, and Side Speaker Out) then click **OK**. The 8-channel audio setup is completed.

**Sound Effect Configuration:**
At the **Sound Effect** menu, users can adjust sound option settings as desired.

**AC'97 Audio Configuration:**
To enable the front panel audio connector to support AC97 Audio mode, go to the Audio Control Panel and click the **Audio I/O** tab. In the **ANALOG** area, click the **Tool** icon and then select the **Disable front panel jack detection** check box. This action completes the AC'97 Audio configuration.
4-2  Troubleshooting

Below is a collection of general asked questions. To check general asked questions based on a specific motherboard model, please log on to http://www.gigabyte.com.tw

Question 1: I cannot see some options that were included in previous BIOS after updating BIOS. Why?
Answer: Some advanced options are hidden in new BIOS version. Please press Ctrl and F1 keys after entering BIOS menu and you will be able to see these options.

Questions 2: Why is the light of my keyboard/optical mouse still on after computer shuts down?
Answer: In some boards, a small amount of electricity is kept on standby after computer shuts down and that’s why the light is still on.

Question 3: How do I clear CMOS?
Answer: If your board has a Clear CMOS jumper, please refer to the Clear CMOS steps in the manual. If your board doesn’t have such jumper, you can take off the on-board battery to leak voltage to clear CMOS. Please refer to the steps below:
   Steps:
   1. Turn off power.
   2. Disconnect the power cord from MB.
   3. Take out the battery gently and put it aside for about 1 minute (Or you can use a metal object to connect the positive and negative pins in the battery holder to make them short for 5 seconds).
   4. Re-insert the battery to the battery holder.
   5. Connect power cord to MB again and turn on power.
   6. Press Del to enter BIOS and load Fail-Safe Defaults (or load Optimized Defaults).
   7. Save changes and reboot the system.

Question 4: Why do I still get a weak sound after turning up the speaker to the maximum volume?
Answer: Please make sure the speaker you are using is equipped with an internal amplifier. If not, please change another speaker with power/amplifier and try again later.

Question 5: Sometimes I hear different continuous beeps from computer after system boots up. What do these beeps usually stand for?
Answer: The beep codes below may help you identify the possible computer problems. However, they are only for reference purposes. The situations might differ from case to case.

→  AWARD BIOS Beep Codes
   1 short: System boots successfully
   2 short: CMOS setting error
   1 long 1 short: DRAM or M/B error
   1 long 2 short: Monitor or display card error
   1 long 3 short: Keyboard error
   1 long 9 short: BIOS ROM error
   Continuous long beeps: DRAM error
   Continuous short beeps: Power error
