Chapter 1 Hardware Installation

1-1 Considerations Prior to Installation

Preparing Your Computer
The motherboard contains numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Thus, prior to installation, please follow the instructions below:

1. Please turn off the computer and unplug its power cord.
2. When handling the motherboard, avoid touching any metal leads or connectors.
3. It is best to wear an electrostatic discharge (ESD) cuff when handling electronic components (CPU, RAM).
4. Prior to installing the electronic components, please have these items on top of an antistatic pad or within a electrostatic shielding container.
5. Please verify that the power supply is switched off before unplugging the power supply connector from the motherboard.

Installation Notices

1. Prior to installation, please do not remove the stickers on the motherboard. These stickers are required for warranty validation.
2. Prior to the installation of the motherboard or any hardware, please first carefully read the information in the provided manual.
3. Before using the product, please verify that all cables and power connectors are connected.
4. To prevent damage to the motherboard, please do not allow screws to come in contact with the motherboard circuit or its components.
5. Please make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
6. Please do not place the computer system on an uneven surface.
7. Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
8. If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

Instances of Non-Warranty

1. Damage due to natural disaster, accident or human cause.
2. Damage as a result of violating the conditions recommended in the user manual.
3. Damage due to improper installation.
4. Damage due to use of uncertified components.
5. Damage due to use exceeding the permitted parameters.
6. Product determined to be an unofficial Gigabyte product.

---

*(Note 1)* Due to the limitation of Windows 32-bit operating system, when more than 4 GB of physical memory is installed, the actual memory available for the operating system will be less than 4 GB; Windows 64-bit operating system doesn't have such limitation.

*(Note 2)* Whether the CPU Smart FAN Control function is supported will depend on the CPU you install.

*(Note 3)* EasyTune functions may vary depending on different motherboards.
1-3 Installation of the CPU and CPU Cooler

Before installing the CPU, please comply with the following conditions:

1. Please make sure that the motherboard supports the CPU.
2. Please take note of the pin 1 marking (the small triangle) on the CPU. If you install the CPU in the wrong direction, the CPU will not insert properly. If this occurs, please change the insert direction of the CPU.
3. Please add an even layer of heat paste between the CPU and CPU cooler.
4. Please make sure the CPU cooler is installed on the CPU prior to system use, otherwise overheating and permanent damage of the CPU may occur.
5. Please set the CPU host frequency in accordance with the processor specifications. It is not recommended that the system bus frequency be set beyond hardware specifications since it does not meet the required standards for the peripherals. If you wish to set the frequency beyond the proper specifications, please do so according to your hardware specifications including the CPU, graphics card, memory, hard drive, etc.

1-3-1 Installation of the CPU

Check the CPU pins to see that none are bent. Move the socket lever to the unlocked position as shown in Fig. 1 (90° to the plane of the motherboard) prior to inserting the CPU. The pin 1 location is designated on the CPU by a small triangle that corresponds to a triangle marking on the socket as shown in Fig. 2. Align the CPU to the socket and gently lower it into place. Do not force the CPU into the socket.

Please use extra care when installing the CPU. The CPU will not fit if positioned incorrectly. Rather than applying force, please change the positioning of the CPU.
1-3-2 Installation of the CPU Cooler

Fig.1
Before installing the CPU cooler, please first add an even layer of heat paste on the surface of the CPU. Install all the CPU cooler components (Please refer to the cooler manual for detailed installation instructions).

Fig.2
Please connect the CPU cooler power connector to the CPU_FAN connector located on the motherboard so that the CPU cooler can properly function to prevent CPU overheating.

The CPU cooler may adhere to the CPU as a result of hardening of the heat paste. To prevent such an occurrence, it is suggested that either thermal tape rather than heat paste be used for heat dissipation or using extreme care when removing the CPU cooler.
1-4 Installation of Memory

Before installing the memory modules, please comply with the following conditions:

1. Please make sure that the memory used is supported by the motherboard. It is recommended that memory of similar capacity, specifications and brand be used.
2. Before installing or removing memory modules, please make sure that the computer power is switched off to prevent hardware damage.
3. Memory modules have a foolproof insertion design. A memory module can be installed in only one direction. If you are unable to insert the module, please switch the direction.

The motherboard supports DDRII memory modules, whereby BIOS will automatically detect memory capacity and specifications. Memory modules are designed so that they can be inserted only in one direction. The memory capacity used can differ with each slot.

![Diagram of memory module installation](image)

Fig.1
The DIMM socket has a notch, so the DIMM memory module can only fit in one direction. Insert the DIMM memory module vertically into the DIMM socket. Then push it down.

Fig.2
Close the plastic clip at both edges of the DIMM sockets to lock the DIMM module.
Reverse the installation steps when you wish to remove the DIMM module.
Dual Channel Memory Configuration

The GA-M61PM-S2 supports the Dual Channel Technology. After operating the Dual Channel Technology, the bandwidth of Memory Bus will double.

Due to CPU limitation, if you wish to operate the Dual Channel Technology, follow the guidelines below:

1. Dual Channel mode will not be enabled if only one memory module is installed.
2. To enable Dual Channel mode with two memory modules (it is recommended to use memory modules of identical brand, size, chips, and speed), you must install them into DIMM sockets of the same color.
3. To enable Dual Channel mode with four memory modules, it is recommended to use memory modules of identical brand, size, chips, and speed.

The following is a Dual Channel Memory configuration table:

(DS: Double Side, SS: Single Side, "--": Empty)

<table>
<thead>
<tr>
<th>DIMM Socket</th>
<th>DDRII_1</th>
<th>DDRII_2</th>
<th>DDRII_3</th>

</tr>
</tbody>
</table>

If two memory modules are to be used to achieve Dual Channel mode, we recommend installing them in DDRII_1 and DDRII_2 DIMM sockets.
1-5 Installation of Expansion Cards

You can install your expansion card by following the steps outlined below:

1. Read the related expansion card's instruction document before install the expansion card into the computer.
2. Remove your computer's chassis cover, screws and slot bracket from the computer.
3. Press the expansion card firmly into expansion slot in motherboard.
4. Be sure the metal contacts on the card are indeed seated in the slot.
5. Replace the screw to secure the slot bracket of the expansion card.
6. Replace your computer's chassis cover.
7. Power on the computer, if necessary, setup BIOS utility of expansion card from BIOS.
8. Install related driver from the operating system.

Installing a PCI Express x16 expansion card:

Please align the VGA card to the onboard PCI Express x16 slot and press firmly down on the slot. Make sure your VGA card is locked by the latch at the end of the PCI Express x16 slot. When you try uninstall the VGA card, please gently press the latch as the picture to the left shows to release the card.
PS/2 Keyboard and PS/2 Mouse Connector
To install a PS/2 port keyboard and mouse, plug the mouse to the upper port (green) and the keyboard to the lower port (purple).

Parallel Port
The parallel port allows connection of a printer, scanner and other peripheral devices.

COMA
Connects to serial-based mouse or data processing devices.

VGA Port
Monitor can be connected to VGA port.

IEEE 1394a Port
Serial interface standard set by the Institute of Electrical and Electronics Engineers, which has features like high speed, high bandwidth and hot plug.

USB Port
Before you connect your device(s) into USB connector(s), please make sure your device(s) such as USB keyboard, mouse, scanner, zip, speaker...etc. have a standard USB interface. Also make sure your OS supports USB controller. If your OS does not support USB controller, please contact OS vendor for possible patch or driver upgrade. For more information please contact your OS or device(s) vendors.

LAN Port
The provided Internet connection is Gigabit Ethernet, providing data transfer speeds of 10/100/1000 Mbps.

Center/Subwoofer Speaker Out
The default Center/Subwoofer Speaker Out jack. Center/Subwoofer speakers can be connected to Center/Subwoofer Speaker Out jack.

Surround Speaker Out (Rear Speaker Out)
The default Surround Speaker Out (Rear Speaker Out) jack. Rear surround speakers can be connected to Surround Speaker Out (Rear Speaker Out) jack.

Side Speaker Out
The default Side Speaker Out jack. Surround side speakers can be connected to Side Speaker Out jack.

Line In
The default Line In jack. Devices like CD-ROM, walkman etc. can be connected to Line In jack.
### Line Out (Front Speaker Out)
The default Line Out (Front Speaker Out) jack. Stereo speakers, earphone or front surround speakers can be connected to Line Out (Front Speaker Out) jack.

### MIC In
The default MIC In jack. Microphone must be connected to MIC In jack.

In addition to the default speakers settings, the audio jacks can be reconfigured to perform different functions via the audio software. Only microphones must be connected to the default Mic In jack ( ). Please refer to the 2-/4-/6-/8- channel audio setup steps for detailed software configuration information.

1/2) ATX_12V/ATX (Power Connector)

With the use of the power connector, the power supply can supply enough stable power to all the components on the motherboard. Before connecting the power connector, please make sure that all components and devices are properly installed. Align the power connector with its proper location on the motherboard and connect tightly.

The ATX_12V power connector mainly supplies power to the CPU. If the ATX_12V power connector is not connected, the system will not start.

Caution!

Please use a power supply that is able to handle the system voltage requirements. It is recommended that a power supply that can withstand high power consumption be used (300W or greater). If a power supply is used that does not provide the required power, the result can lead to an unstable system or a system that is unable to start.

If you use a 24-pin ATX power supply, please remove the small cover on the power connector on the motherboard before plugging in the power cord; otherwise, please do not remove it.

3/4) CPU_FAN / SYS_FAN (Cooler Fan Power Connector)

The cooler fan power connector supplies a +12V power voltage via a 3-pin (SYS_FAN)/4-pin (CPU_FAN) power connector and possesses a foolproof connection design. Most coolers are designed with color-coded power connector wires. A red power connector wire indicates a positive connection and requires a +12V power voltage. The black connector wire is the ground wire (GND).

Please remember to connect the CPU/system fan cable to the CPU_FAN/SYS_FAN connector to prevent the CPU/system from overheating and failure.

5) FDD (Floppy Connector)

The FDD connector is used to connect the FDD cable while the other end of the cable connects to the FDD drive. The types of FDD drives supported are: 360 KB, 720 KB, 1.2 MB, 1.44 MB and 2.88 MB. Before attaching the FDD cable, please take note of the foolproof groove in the FDD connector.
6) **IDE (IDE Connector)**

An IDE device connects to the computer via an IDE connector. One IDE connector can connect to one IDE cable, and the single IDE cable can then connect to two IDE devices (hard drive or optical drive). If you wish to connect two IDE devices, please set the jumper on one IDE device as Master and the other as Slave (for information on settings, please refer to the instructions located on the IDE device). Before attaching the IDE cable, please take note of the foolproof groove in the IDE connector.

7) **SATAII0/1/2/3 (SATA 3Gb/s Connectors)**

SATA 3Gb/s can provide up to 300 MB/s transfer rate. Please refer to the BIOS setting for the SATA 3Gb/s and install the proper driver in order to work properly.
8) **F_AUDIO (Front Audio Connector)**

This connector supports either HD (High Definition) or AC97 front panel audio module. If you wish to use the front audio function, connect the front panel audio module to this connector. Check the pin assignments carefully while you connect the front panel audio module. Incorrect connection between the module and connector will make the audio device unable to work or even damage it. For optional front panel audio module, please contact your chassis manufacturer.

By default, the audio driver is configured to support HD Audio. To connect an AC97 front panel audio module to this connector, please refer to the instructions on Page 72 about the software settings.
9) **F_PANEL (Front Panel Jumper)**

Please connect the power LED, PC speaker, reset switch and power switch etc. of your chassis front panel to the F_PANEL connector according to the pin assignment below.

Be careful with the polarity of the front USB connector. Check the pin assignment carefully while you connect the front USB cable, incorrect connection between the cable and connector will make the device unable to work or even damage it. For optional front USB cable, please contact your local dealer.

15) SPDIF_IO (S/PDIF In/Out Connector)
The S/PDIF output is capable of providing digital audio to external speakers or compressed AC3 data to an external Dolby Digital Decoder. Use this feature only when your stereo system has digital input function. Use S/PDIF IN feature only when your device has digital output function. Be careful with the polarity of the S/PDIF_IO connector. Check the pin assignment carefully while you connect the S/PDIF cable, incorrect connection between the cable and connector will make the device unable to work or even damage it. 16) **CLR_CMOS (Clear CMOS)**

You may clear the CMOS data to its default values by this header. To clear CMOS, temporarily short the two pins. Default doesn't include the jumper to avoid improper use of this header.

17) **CI (Chassis Intrusion, Case Open)**

This 2-pin connector allows your system to detect if the chassis cover is removed. You can check the "Case Open" status in BIOS Setup.

18) BATTERY

- Danger of explosion if battery is incorrectly replaced.
- Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to the manufacturer's instructions.

If you want to erase CMOS...
1. Turn off the computer and unplug the power cord.
2. Gently take out the battery and put it aside for about one minute. (Or you can use a metal object to connect the positive and negative pins in the battery holder to make them short for five seconds.)
3. Re-install the battery.
4. Plug the power cord in and turn on the computer.
BIOS (Basic Input and Output System) includes a CMOS SETUP utility which allows user to configure required settings or to activate certain system features.

The CMOS SETUP saves the configuration in the CMOS SRAM of the motherboard.

When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS SRAM.

When the power is turned on, pressing the <Del> button during the BIOS POST (Power-On Self Test) will take you to the CMOS SETUP screen. You can enter the BIOS setup screen by pressing "Ctrl + F1". If you wish to upgrade to a new BIOS, either Gigabyte's Q-Flash or @BIOS utility can be used. Q-Flash allows the user to quickly and easily update or backup BIOS without entering the operating system.

@BIOS is a Windows-based utility that does not require users to boot to DOS before upgrading BIOS but directly download and update BIOS from the Internet.

The Main Menu (For example: BIOS Ver. : F4d)
Once you enter Award BIOS CMOS Setup Utility, the Main Menu (as figure below) will appear on the screen. Use arrow keys to select among the items and press <Enter> to accept or enter the sub-menu.

1. If you don’t find the settings you want, press "Ctrl+F1" to access advanced options.
2. Select the **Load Optimized Defaults** item in the BIOS Setup when somehow the system is not stable as usual. This action makes the system reset to the default settings for stability.
3. The BIOS Setup menus described in this chapter are for reference only and may differ from the exact settings for your motherboard.
- Standard CMOS Features
  This setup page includes all the items in standard compatible BIOS.

- Advanced BIOS Features
  This setup page includes all the items of Award special enhanced features.

- Integrated Peripherals
  This setup page includes all onboard peripherals.

- Power Management Setup
  This setup page includes all the items of Green function features.

- PnP/PCI Configurations
  This setup page includes all the configurations of PCI & PnP ISA resources.

- PC Health Status
  This setup page is about system autodetect temperature, voltage, fan speed, etc.

- Load Fail-Safe Defaults
  Fail-Safe Defaults indicates the value of the system parameters which the system would be in safe configuration.

- Load Optimized Defaults
  Optimized Defaults indicates the value of the system parameters which the system would be in best performance configuration.

- Set Supervisor Password
  Change, set, or disable password. It allows you to limit access to the system and Setup, or just to Setup.

- Set User Password
  Change, set, or disable password. It allows you to limit access to the system.

- Save & Exit Setup
  Save CMOS value settings to CMOS and exit setup.

- Exit Without Saving
  Abandon all CMOS value changes and exit setup.

Date

The date format is <week>, <month>, <day>, <year>.
- **Week** The week, from Sun to Sat, determined by the BIOS and is display-only
- **Month** The month, Jan. Through Dec.
- **Day** The day, from 1 to 31 (or the maximum allowed in the month)
- **Year** The year, from 1999 through 2098

Time

The times format in <hour> <minute> <second>. The time is calculated based on the 24-hour military-time clock. For example, 1 p.m. is 13:00:00.

IDE Channel 0 Master/Slave

- **IDE HDD Auto-Detection**
  Press "Enter" to select this option for automatic device detection.
  - **IDE Channel 0, Master/Slave** IDE/SATA Device Setup. You can use one of three methods:
    - **Auto** Allows BIOS to automatically detect IDE/SATA devices during POST (default)
    - **None** Select this if no IDE/SATA devices are used and the system will skip the automatic detection step and allow for faster system start up.
    - **Manual** User can manually input the correct settings
  - **Access Mode** Use this to set the access mode for the hard drive. The four options are: CHS/LBA/Large/Auto (default: Auto)

IDE Channel 2, 3, 4, 5 Master

- **IDE Auto-Detection**
  Press "Enter" to select this option for automatic device detection.
  - **Extended IDE Drive** IDE/SATA Device Setup. You can use one of the two methods:
    - **Auto** Allows BIOS to automatically detect IDE/SATA devices during POST (default)
    - **None** Select this if no IDE/SATA devices are used and the system will skip the automatic detection step and allow for faster system start up.
Access Mode Use this to set the access mode for the hard drive. The two options are: Large/Auto(default:Auto)

Capacity Capacity of currently installed hard drive. Hard drive information should be labeled on the outside drive casing. Enter the appropriate option based on this information.

Head Number of heads
Precomp Write precomp
Landing Zone Landing zone
Sector Number of sectors

Drive A
The category identifies the types of floppy disk drive A that has been installed in the computer.
None No floppy drive installed.
360K, 5.25" 5.25 inch PC-type standard drive; 360K byte capacity.
1.2M, 5.25" 5.25 inch AT-type high-density drive; 1.2M byte capacity. (3.5 inch when 3 Mode is Enabled).
720K, 3.5" 3.5 inch double-sided drive; 720K byte capacity
1.44M, 3.5" 3.5 inch double-sided drive; 1.44M byte capacity.
2.88M, 3.5" 3.5 inch double-sided drive; 2.88M byte capacity.

Floppy 3 Mode Support (for Japan Area)
Disabled Normal Floppy Drive. (Default value)
Drive A Drive A is 3 mode Floppy Drive.

Halt on
The category determines whether the computer will stop if an error is detected during power up.
No Errors The system boot will not stop for any error that may be detected and you will be prompted.
All Errors Whenever the BIOS detects a non-fatal error the system will be stopped.
All, But Keyboard The system boot will not stop for a keyboard error; it will stop for all other errors. (Default value)
All, But Diskette The system boot will not stop for a disk error; it will stop for all other errors.
All, But Disk/Key The system boot will not stop for a keyboard or disk error; it will stop for all other errors.

Memory
The category is display-only which is determined by POST (Power On Self Test) of the BIOS.

Base Memory
The POST of the BIOS will determine the amount of base (or conventional) memory installed in the system.
The value of the base memory is typically 512K for systems with 512K memory installed on the motherboard, or 640K for systems with 640K or more memory installed on the motherboard.

Extended Memory
The BIOS determines how much extended memory is present during the POST.
This is the amount of memory located above 1 MB in the CPU's memory address map.
2-2 Advanced BIOS Features

AM K8 Cool&Quiet control

- Auto: AMD Cool'n'Quiet driver manages clock and VID to best serve the thermal, performance and power requirements. (Default value)
- Disabled: Disable this function.

Hard Disk Boot Priority

Select boot sequence for onboard(or add-on cards) SCSI, RAID, etc.
Use <↑> or <↓> to select a device, then press <↑> to move it up, or <↓> to move it down the list.
Press <ESC> to exit this menu.

- LS120: Select your boot device priority by LS120.
- Hard Disk: Select your boot device priority by Hard Disk.
- CDROM: Select your boot device priority by CDROM.
- ZIP: Select your boot device priority by ZIP.
- USB-FDD: Select your boot device priority by USB-FDD.
- USB-ZIP: Select your boot device priority by USB-ZIP.
- USB-CDROM: Select your boot device priority by USB-CDROM.
- USB-HDD: Select your boot device priority by USB-HDD.
- Legacy LAN: Select your boot device priority by Legacy LAN.
- Disabled: Disable this function.

Password Check

- System: The system can not boot and can not access to Setup page will be denied if the correct password is not entered at the prompt.
- Setup: The system will boot, but access to Setup will be denied if the correct password is not entered at the prompt. (Default value)
HDD S.M.A.R.T. Capability
This feature allows your hard disk to report read/write errors and to issue warnings when third-party hardware monitor utility is installed.
- Disabled: Disable HDD S.M.A.R.T. capability. (Default value)

Away Mode
- Disabled: Disable this function. (Default value)
- Enabled: Enable Away Mode in Windows XP Media Center operating system.
  (Away Mode: Enables the system to silently perform unattended tasks while in a low-power mode that appears off.)

Init Display First
This feature allows you to select the first initiation of the monitor display from which card when you install a PCI card and a PCI Express VGA card on the motherboard.
- PCI Slot: Set Init Display First to PCI VGA card.
- Onboard VGA: Set Init Display First to onboard VGA.
- PEG: Set Init Display First to PCI Express VGA card. (Default value)

Frame Buffer Size
- 16M: Set on-chip frame buffer size to 16 MB.
- 32M: Set on-chip frame buffer size to 32 MB.
- 64M: Set on-chip frame buffer size to 64 MB. (Default value)
- 128M: Set on-chip frame buffer size to 128 MB.
- 256M: Set on-chip frame buffer size to 256 MB.
- Disabled: Disable this function.

Onboard GPU
This item allows the user to decide when to activate the onboard VGA function.
- Enable If No Ext PEG: Activate the onboard VGA first only when no PCI Express VGA card is installed. (Default value)
- Always Enable
Always activate the onboard VGA first, whether or not a PCI Express card is installed. If you wish to set up a dual view configuration, set this item to Always Enable.

SMART LAN (LAN Cable Diagnostic Function)

This motherboard incorporates cable diagnostic feature designed to detect the status of the attached LAN cable. This feature will detect cabling issue and report the approximate distance to the fault or short. Refer to the following information for diagnosing your LAN cable:

- **When No LAN Cable Is Attached**...
  If no LAN cable is attached to the motherboard, the **Status** fields of all four pairs of wires will show **Open** and the **Length** fields show **0.0m**, as shown in the figure above.

- **When LAN Cable Is Functioning Normally**...
  If no cable problem is detected on the LAN cable connected to a Gigabit hub or a 10/100 Mbps hub, the following message will appear:

  ![Smart LAN Status](smart_lan_status.png)

  - **Link Detected** Displays transmission speed
  - **Cable Length** Displays the approximate length of the attached LAN cable.

  Note: The Gigabit hub will only operate at a speed of 10/100Mbps in MS-DOS mode; it will operate at a normal speed of 10/100/1000Mbps in Windows mode or when the LAN Boot ROM is activated.

- **When a Cable Problem Occurs**...
  If a cable problem occurs on a specified pair of wires, the **Status** field will show **Short** and the length shown will be the approximate distance to the fault or short.

  **Example:** Pair1-2 Status = Short / Length = 1.6m

  Explanation: A fault or short might occur at about 1.6m on Pair 1-2.

  Note: Pair 4-5 and Pair 7-8 are not used in a 10/100 Mbps environment, their **Status** fields will show **Open**, and the length shown is the approximate length of the attached LAN cable.
Onboard LAN Boot ROM
This function decide whether to invoke the boot ROM of the onboard LAN chip.
- Enabled Enable this function.
- Disabled Disable this function. (Default value)

Onboard Serial Port 1
- Auto BIOS will automatically setup the port 1 address.
- 3F8/IRQ4 Enable onboard Serial Port 1 and address is 3F8/IRQ4. (Default value)
- 2F8/IRQ3 Enable onboard Serial Port 1 and address is 2F8/IRQ3.

Onboard Serial Port 2
- Auto BIOS will automatically setup the port 2 address.
- 3F8/IRQ4 Enable onboard Serial Port 2 and address is 3F8/IRQ4.
- 2F8/IRQ3 Enable onboard Serial Port 2 and address is 2F8/IRQ3. (Default value)
- 3E8/IRQ4 Enable onboard Serial Port 2 and address is 3E8/IRQ4.
- 2E8/IRQ3 Enable onboard Serial Port 2 and address is 2E8/IRQ3.
- Disabled Disable onboard Serial Port 2.

Onboard Parallel Port
- Disabled Disable onboard LPT port.
- 378/IRQ7 Enable onboard LPT port and address is 378/IRQ7. (Default value)
- 278/IRQ5 Enable onboard LPT port and address is 278/IRQ5.
- 3BC/IRQ7 Enable onboard LPT port and address is 3BC/IRQ7.

Parallel Port Mode
- SPP Using Parallel port as Standard Parallel Port. (Default value)
- EPP Using Parallel port as Enhanced Parallel Port.
- ECP Using Parallel port as Extended Capabilities Port.
- ECP+EPP Using Parallel port as ECP and EPP mode.

ECP Mode Use DMA
This option is available only when Parallel Port Mode is set to ECP or ECP+EPP.
- 3 Set ECP Mode Use DMA to 3. (Default value)
- 1 Set ECP Mode Use DMA to 1.

On-Chip USB
- V1.1+V2.0 Enable the USB 1.1 and USB 2.0 controllers. (Default Value)
- V1.1 Enable only the USB 1.1 controller.
- Disabled Disable the onboard USB controller.

USB Keyboard Support
- Enabled Enable USB keyboard support.
- Disabled Disable USB keyboard support. (Default value)

USB Mouse Support
- Enabled Enable USB mouse support.
- Disabled Disable USB mouse support. (Default value)

Legacy USB storage detect
This option allows users to decide whether to detect USB storage devices, including USB flash drives and USB hard drives during POST.
- Enabled BIOS will scan all USB storage devices. (Default value)
- Disabled Disable this function.

- Keyboard 98  If your keyboard have "POWER Key" button, you can press the key to power on the system.
- Any KEY  Press any keys on your keyboard to power on the system.
- Password  Enter from 1 to 5 characters to set the Keyboard Power On Password.

KB Power ON Password
When "Power On by Keyboard" is set to Password, you can set the password here.
- Enter  Input password (from 1 to 5 characters) and press Enter to set the Keyboard Power On password.

AC Back Function
- Soft-Off  When AC-power back to the system, the system will be in "Off" state. (Default value)
- Full-On  When AC-power back to the system, the system always in "On" state.

2-9 Set Supervisor/User Password

When you select this function, the following message will appear at the center of the screen to assist you in creating a password.

Type the password, up to eight characters, and press <Enter>. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password.

To disable password, just press <Enter> when you are prompted to enter password. A message "PASSWORD DISABLED" will appear to confirm the password being disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

The BIOS Setup program allows you to specify two separate passwords: SUPERVISOR PASSWORD and a USER PASSWORD. When disabled, anyone may access all BIOS Setup program function. When enabled, the Supervisor password is required for entering the BIOS Setup program and having full configuration fields, the User password is required to access only basic items.

If you select "System" at "Password Check" in Advance BIOS Features Menu, you will be prompted for the password every time the system is rebooted or any time you try to enter Setup Menu.

If you select "Setup" at "Password Check" in Advance BIOS Features Menu, you will be prompted only when you try to enter Setup.
### 2-10 Save & Exit Setup

Type "Y" will quit the Setup Utility and save the user setup value to RTC CMOS. Type "N" will return to Setup Utility.

### 2-11 Exit Without Saving

Type "Y" will quit the Setup Utility without saving to RTC CMOS. Type "N" will return to Setup Utility.
Chapter 3 Drivers Installation

Pictures below are shown in Windows XP.
Insert the driver CD-title that came with your motherboard into your CD-ROM drive, the driver CD-title will auto start and show the installation guide. If not, please double click the CD-ROM device icon in "My computer", and execute the Run.exe.

3-1 Install Chipset Drivers

"Xpress Install " is now analyzing your computer...99%

After insert the driver CD, "Xpress Install" will scan automatically the system and then list all the drivers that recommended to install. Please pick the item that you want and press "install" followed the item; or you can press "Xpress Install" to install all items defaulted.

Some device drivers will restart your system automatically. After restarting your system the "Xpress Install" will continue to install other drivers. System will reboot automatically after install the drivers, afterward you can install others application.

For USB2.0 driver support under Windows XP operating system, please use Windows Service Pack. After install Windows Service Pack, it will show a question mark "?" in "Universal Serial Bus controller" under "Device Manager". Please remove the question mark and restart the system (System will auto-detect the right USB2.0 driver).

4-1-2  Xpress Recovery2 Introduction

Xpress Recovery2 is designed to provide quick backup and restoration of hard disk data. Supporting Microsoft operating systems including Windows XP/2000/NT/98/Me and DOS, and file systems including FAT16, FAT32, and NTFS, Xpress Recovery2 is able to back up data on hard disks on PATA and SATA IDE controllers. After Xpress Recovery2 is executed from CD-ROM for the first time, it will stay permanent in your hard disk. If you wish to run Xpress Recovery2 later, you can simply press F9 during system bootup to enter Xpress Recovery2 without the CD-ROM.

System requirements:
1. Intel x86 platforms
2. At least 64M bytes of system memory
3. VESA-supported VGA cards

How to use the Xpress Recovery2

Initial access by booting from CD-ROM and subsequent access by pressing the F9 key:
Steps: After entering BIOS Setup, go to Advanced BIOS Feature and set to boot from CD-ROM. Save the settings and exit the BIOS Setup. Insert the provided driver CD into your CD-ROM drive. Upon system restart, the message which says "Boot from CD/DVD:" will appear in the bottom left corner of the screen. Press any key to enter Xpress Recovery2.
After the steps above are completed, subsequent access to Xpress Recovery2 can be made by simply pressing the <F9> key during system power-on.

1. If you have already entered Xpress Recovery2 by booting from the CD-ROM, you can enter Xpress Recovery2 by pressing the <F9> key in the future.
2. System storage capacity and the reading/writing speed of the hard disk will affect the data backup speed.
3. It is recommended that Xpress Recovery2 be immediately installed once you complete installations of OS and all required drivers as well as software.
The Main Screen of Xpress Recovery2

1. **RESTORE:**
   Restore the backed-up data to your hard disk.
   (This button will not appear if there is no backup file.)

2. **BACKUP:**
   Back up data from hard disk.

3. **REMOVE:**
   Remove previously-created backup files to release disk space.
   (This button will not appear if there is no backup file.)

4. **REBOOT:**
   Exit the main screen and restart the system.

**Limitations:**

1. Not compatible to Xpress Recovery.
2. For the use of Xpress Recovery2, a primary partition must be reserved.
3. Xpress Recovery2 will store the backup file at the end of the hard disk, so free space available on the hard disk for the backup file must be allocated in advance. (A minimum 4GB is recommended but the actual space is dependent on the size of the data to be backed up)
4. Capable of backing up hard disks installed with Windows operating systems including DOS and Windows XP/2000/NT/9x/Me.
5. USB hard disks are currently not supported.
6. Does not support RAID/AHCI (class code 0104/0106) hard disks.
7. Capable of backing up and restoring only the first physical hard disk.

**Hard disks detection sequence is as follows:**

- a. PATA IDE primary channel
- b. PATA IDE secondary channel
- c. SATA IDE channel 1
- d. SATA IDE channel 2
- e. SATA IDE channel 3
- f. SATA IDE channel 4

**Precautions:**

1. When using hard disks with more than 128G under Windows 2000, be sure to execute the EnableBigLba.exe program from the driver CD before data backup.
2. It is normal that data backup takes longer time than data restoration.
3. Xpress Recovery2 is compliant with the GPL regulations.
4. On a few motherboards based on Nvidia chipsets, BIOS update is required for Xpress Recovery2 to correctly identify RAID and SATA IDE mode. Please contact your motherboard manufacturer.
4-1-3 Flash BIOS Method Introduction

Method 1 : Q-Flash™
Q-Flash™ is a BIOS update tool that allows the user to update BIOS without entering operating systems like MS-DOS or Windows. Embedded in the BIOS, the Q-Flash™ tool frees you from the hassles of going through complicated BIOS flashing process.

Before Use:
Follow the steps below before using Q-Flash to update BIOS:
1. From GIGABYTE’s website, download the latest compressed BIOS update file that matches your motherboard model
2. Extract the downloaded BIOS files and save the new BIOS file (e.g. M61PMS2.F1) to your floppy disk or hard disk. Q-Flash only supports:
   a. FAT32/16/12 USB flash drives/hard drives
   b. FAT32/16/12 IDE/SATA hard drives that are connected to the IDE/SATA controllers integrated with the southbridge.
   NOTE: Hard drives in RAID/AHCI mode are not supported.
3. Restart the system and press the DELETE key to enter BIOS Setup. While in BIOS Setup, press the F8 key to enter Q-Flash.

   Because BIOS flashing is potentially risky, please do it with caution and avoid inadequate operation that may result in system malfunction.

Updating the BIOS
Step 1:
   a. In the Q-Flash menu, use the UP or DOWN ARROW key to select Update BIOS from Drive and press ENTER.

   If you wish to back up the current BIOS file, use the Save BIOS to Drive function.

   b. Select the floppy drive or hard drive where the BIOS file is saved, such as "Floppy A" and press ENTER.

   c. Select the BIOS file and press ENTER.

   Make sure again the BIOS file matches your motherboard model.
Step 2: The process of system reading the BIOS file from the floppy disk is displayed on the screen. When the message "Are you sure to update BIOS?" appears, press ENTER. The BIOS update will begin and the current process will be displayed.

1. Do not turn off or restart the system when the system is reading/updating the BIOS.
2. Do not remove the floppy disk or hard drive/USB drive when the system is updating the BIOS.

Step 3: When the update process is complete, press any key to return to the Q-Flash main menu.

Step 4: Press ESC and then DELETE to exit Q-Flash and the system will restart. As the system reboots, you will see the new BIOS version during POST.

Step 5: As the system reboots, press DELETE to enter BIOS Setup. Select Load Optimized Defaults and press ENTER to load BIOS defaults. System will re-detect all peripherals devices after BIOS update, so we recommend that you reload BIOS defaults.

Press Y to load BIOS defaults

Step 6: Select Save & Exit Setup and then press Y to save settings to CMOS and exit BIOS Setup. When the system restarts, the whole update process is complete.
Method 2 : @BIOS™ Utility

If you do not have a DOS startup disk, we recommend that you use the new @BIOS utility. @BIOS allows users to update their BIOS under Windows. Just select the desired @BIOS server to download the latest version of BIOS.

1. Methods and steps:
   I. Update BIOS through Internet
      a. Click "Internet Update" icon
      b. Click "Update New BIOS" icon
      c. Select @BIOS™ sever
      d. Select the exact model name on your motherboard
      e. System will automatically download and update the BIOS.

   II. Update BIOS NOT through Internet:
      a. Do not click "Internet Update" icon
      b. Click "Update New BIOS"
      c. Please select "All Files" in dialog box while opening the old file.
      d. Please search for BIOS unzip file, downloading from internet or any other methods (such as: M61PMS2.F1).
      e. Complete update process following the instruction.
III. Save BIOS
In the very beginning, there is "Save Current BIOS" icon shown in dialog box. It means to save the current BIOS version.

IV. Check out supported motherboard and Flash ROM:
In the very beginning, there is "About this program" icon shown in dialog box. It can help you check out which kind of motherboard and which brand of Flash ROM are supported.

2. Note:
I. In method I, if it shows two or more motherboard's model names to be selected, please make sure your motherboard's model name again. Selecting wrong model name will cause the system unbooted.
II. In method II, be sure that motherboard's model name in BIOS unzip file are the same as your motherboard's. Otherwise, your system won't boot.
III. In method I, if the BIOS file you need cannot be found in @BIOS™ server, please go onto Gigabyte's web site for downloading and updating it according to method II.
IV. Please note that any interruption during updating will cause system unbooted.
V. Do not use @BIOS and C.O.M. (Corporate Online Management) at the same time.
4-1-4 Configuring SATA Hard Drive(s)

To configure SATA hard drive(s), follow the steps below:

1. Install SATA hard drive(s) in your system.
2. Configure SATA controller mode and boot sequence in BIOS Setup.
3. Configure RAID set in RAID BIOS. (Note )
4. Make a floppy disk containing the SATA controller driver. (Note )
5. Install the SATA controller driver during OS installation. (Note )

Before you begin

Please prepare:
(a) SATA hard drive(s). To ensure optimal performance, it is recommended that you use two hard drives with identical model and capacity for RAID array. If you do not want to create RAID, you may prepare only one hard drive.
(b) An empty formatted floppy disk. (Note )
(c) Windows XP/2000 setup disk.
(d) Driver CD for your motherboard. (Note )

(1) Installing SATA hard drive(s) in your computer

Attach one end of the SATA signal cable to the rear of the SATA hard drive and the other end to available SATA port(s) on the motherboard. Then connect the power connector from your power supply to the hard drive.
(2) Configuring SATA controller mode and boot sequence in BIOS Setup

Make sure to configure the SATA controller mode correctly in system BIOS Setup and set the first boot device.

Step 1:

Turn on your computer and press Del to enter BIOS Setup during POST (Power-On Self Test). In BIOS Setup, go to Integrated Peripherals --> Serial-ATA RAID Config (Figure 1).

![Figure 1](image)

To set up a RAID array, ensure that NV SATA RAID function is enabled (Figure 2), otherwise leave it disabled. Then enable the SATA channels with hard disks that you want to use for RAID (for example, NV SATA 1 Primary RAID controls the SATAII0 connector and NV SATA 1 Secondary RAID controls the SATAII1 connector) (Figure 2).

![Figure 2](image)

The BIOS Setup menus described in this section may not show the exact settings for your motherboard. The actual BIOS Setup menu options you will see shall depend on the motherboard you have and the BIOS version.
Step 2:
To boot from Windows installation CD-ROM, set **First Boot Device** under the **Advanced BIOS Features** menu to **CDROM** (Figure 3).

![CMOS Setup Utility](image)

Step 3:
Save and exit BIOS Setup.
(3) Configuring RAID set in RAID BIOS

Enter the RAID BIOS setup utility to configure a RAID array. Skip this step if you do not want to create RAID.

Step 1:
After the POST memory test begins and before the operating system boot begins, look for a message which says "Press F10 to enter RAID setup utility" (Figure 4). Hit the F10 key to enter the RAID BIOS setup utility.

![Figure 4](image)

Step 2:
The Define a New Array screen is the first option screen when you enter the NVIDIA RAID setup utility. (Figure 5). You can press the TAB key to highlight through options.

Step 3:
In the RAID Mode field, use the UP or DOWN ARROW key to select a RAID mode. The supported RAID modes include Mirroring, Striping, Stripe Mirroring, Spanning and RAID 5. The following is an example of RAID 0 array creation.

Step 4:
If RAID 0 (Striping) is selected, you can manually set the striping block size. In the Striping Block field, use the UP or DOWN ARROW key to set the Striping Block size. The KB is the standard unit of Striping Block size. We recommend you leaving it to the default setting--Optimal (64K). The size range is from 4K to 128K.

![Figure 5](image)
Step 5:
Next, select the hard drives which you wish to be included in the disk array. The Free Disks section displays the information about the currently installed SATA hard drives. Press the TAB key to move to the Free Disks section. Select the target hard drives using the UP or DOWN ARROW key and use the RIGHT ARROW key to add the hard drives to the Array Disks section (Figure 6).

![Figure 6](image)

Step 6:
Press F7 after selecting the target hard disks. A message which says "Clear disk data?" will appear (Figure 7). If you are sure to clear the data in the selected hard drives, press Y. (If the hard drives contain previously created RAID array, you need to press Y to clear the data from the hard drives.)

![Figure 7](image)
After that, the Array List screen displaying the RAID array you created will appear (Figure 8). (Note: **BBS** stands for BIOS Boot Specification. This indicates that the boot device is defined in the BIOS.)

![Image of Array List screen](image)

To read more information about the RAID array, press ENTER to enter the Array Detail screen (Figure 9), where you should see detailed information about RAID mode, disk block size, disk model name, and disk capacity, etc.

![Image of Array Detail screen](image)

To delete the array, press D in the Array Detail screen. When the "Delete this array?" message appears, press Y to confirm or N to cancel. Press ENTER to return to the Array List screen.

To exit the Nvidia RAID utility, press ESC in the main menu or Ctrl+X in the Array List screen.

Now, you can proceed to install the SATA controller driver and operating system.
(4) Making a SATA Driver Disk

To install operating system onto RAID disks successfully, you need to install the SATA RAID driver during OS installation. Without the driver, the hard disk may not be recognized during the Windows setup process. Skip this step if you do not want to create RAID. First of all, copy the driver for the SATA controller from the motherboard driver CD-ROM to a floppy disk. See the instructions below about how to copy the driver in MS-DOS mode (Note). Prepare a startup disk that has CD-ROM support and a blank formatted floppy disk.

Step 1: Insert the prepared startup disk and motherboard driver CD-ROM in your system. Boot from the startup disk. Once at the A:\> prompt, change to the CD-ROM drive (example: D:\>). At the D:\> prompt, type the following two commands. Press ENTER after each command (Figure 10):

```
cd bootdrv
menu
```

Step 2: When the controller menu (Figure 11) appears, remove the startup disk and insert the blank formatted disk. Select the controller driver by pressing the corresponding letter from the menu. For example, from the menu in Figure 11, press K to select (K) nVIDIA MCP61 Series Raid (XP) if you wish to install Windows XP (32-bit). Your system will then automatically zip and transfer this driver file to the floppy disk. Press 0 to exit when finished.

(Note) For users without a startup disk:
Use an alternative system and insert the GIGABYTE motherboard driver CD-ROM. From the CD-ROM drive folder, double click the MENU.exe file in the BootDrv folder (Figure 12). A command prompt window will open similar to that in Figure 11.
(5) Installing SATA controller driver during OS installation

Now that you have prepared the SATA driver disk and configured BIOS settings, you are ready to install Windows 2000/XP onto your SATA hard drive with the SATA driver. The following is an example of Windows XP installation.

Step 1: Restart your system to boot from the Windows 2000/XP Setup disk and press F6 as soon as you see the "Press F6 if you need to install a 3rd party SCSI or RAID driver" message (Figure 13). After pressing F6, there will be a few moments of some files being loaded before you see the next screen.

Step 2:
When a screen similar to that below appears, insert the floppy disk containing the SATA driver and press S (Figure 14).

---

Figure 13

Figure 14

---
Step 3:
If Setup correctly recognizes the driver in the floppy disk, a controller menu similar to Figure 15 below will appear. Use the ARROW keys to select **NVIDIA RAID CLASS DRIVER** (Figure 15) and press ENTER. Later, when a screen similar to Figure 16 appears, you must press S to select additional driver. The screen will return to previous screen as shown in Figure 15. Select **NVIDIA nForce Storage Controller** and press ENTER.

If a message appears saying one or some file(s) cannot be found, please check the floppy disk or copy the correct SATA driver again from the motherboard driver CD.
After the SATA controller driver installation is completed, you can proceed with the Windows 2000/XP installation.

**Step 4:**
When the next screen (Figure 17) appears, press ENTER to continue the SATA driver installation from the floppy disk.

![Figure 17](image)

After the SATA controller driver installation is completed, you can proceed with the Windows 2000/XP installation.

**Figure 18**

(Note: Each time you add a new hard drive to a RAID array, the RAID driver will have to be installed under Windows once for that hard drive. After that, the driver will not have to be installed.)
4-1-5  2- / 4- / 6- / 8- Channel Audio Function

Introduction

The default speaker settings for the 6 audio jacks are as shown in the picture to the right. The jack retasking capability supported by HD Audio allows users to change the function for each audio jack by the audio software provided. For example, if a rear speaker is plugged into the center/subwoofer speaker out jack, you can change the center/subwoofer speaker out jack to function as a rear speaker out jack via the audio software. Please follow the steps to install the function. (Following pictures are in Windows XP)

Note that if you wish to connect a microphone, you MUST connect it to the default Mic In jack for the microphone to work correctly.

HD Audio

With multiple built-in high quality digital-to-analog converters (DACs) that support audio output at up to 192 kHz/24-bit quality and multi-streaming applications, HD Audio is able to handle multiple audio streams (in and out) simultaneously. Multi-channel audio experiences have become a reality so you can, for instance, listen to MP3 music, have an Internet chat, make a telephone call over the Internet, and etc. all at the same time.

Stereo Speakers Connection and Settings:

We recommend that you use the speaker with amplifier to acquire the best sound effect if the stereo output is applied.

STEP 1:

After installation of the audio driver, you should find an Audio Manager icon in your system tray (you can also find the icon in Control Panel). Double-click the icon to open the Audio Control Panel.
STEP 2:
In the Audio Control Panel, click the **Audio I/O** tab. In the upper left list, click **2CH Speaker**.

STEP 3:
After a speaker or headphone is plugged into the rear Line Out jack, a small window will pop up and ask you what type of equipment is connected. Choose **Headphone** or **Line Out** depending on the device connected and click **OK**. The 2-channel audio setup is completed.

**4 Channel Audio Setup**

STEP 1:
After installation of the audio driver, you should find an Audio Manager icon in your system tray (you can also find the icon in Control Panel). Double-click the icon to open the Audio Control Panel.

STEP 2:
In the Audio Control Panel, click the **Audio I/O** tab. In the upper left list, click **4CH Speaker**.
6 Channel Audio Setup

STEP 1:
After installation of the audio driver, you should find an Audio Manager icon in your system tray (you can also find the icon in Control Panel). Double-click the icon to open the Audio Control Panel.

STEP 2:
In the Audio Control Panel, click the Audio I/O tab. In the upper left list, click 6CH Speaker.

STEP 3:
After plugging in 6-channel speakers to the rear speaker jacks, a small window will pop up and ask you what type of equipment is connected. Choose a device depending on the type of speaker connected (6-channel audio consists of Front Speaker Out (Line Out), Rear Speaker Out, and Center/Subwoofer Speaker Out) then click OK. The 6-channel audio setup is completed.

STEP 3:
After plugging in 4-channel speakers to the rear speaker jacks, a small window will pop up and ask you what type of equipment is connected. Choose a device depending on the type of speaker connected (4-channel audio consists of Front Speaker Out (Line Out) and Rear Speaker Out) and then click OK. The 4-channel audio setup is completed.
8 Channel Audio Setup

STEP 1:
After installation of the audio driver, you should find an Audio Manager icon in your system tray (you can also find the icon in Control Panel). Double-click the icon to open the Audio Control Panel.

STEP 2:
In the Audio Control Panel, click the Audio I/O tab. In the upper left list, click 8CH Speaker.

STEP 3:
After plugging in 8-channel speakers to the rear speaker jacks, a small window will pop up and ask you what type of equipment is connected. Choose a device depending on the type of speaker connected (8-channel audio consists of Front Speaker Out (Line Out), Rear Speaker Out, Center/Subwoofer Speaker Out, and Side Speaker Out) then click OK. The 8-channel audio setup is completed.
Sound Effect Configuration:
At the Sound Effect menu, users can adjust sound option settings as desired.

AC’97 Audio Configuration:
To enable the front panel audio connector to support AC97 Audio mode, go to the Audio Control Panel and click the Audio I/O tab. In the ANA-LOG area, click the Tool icon and then select the Disable front panel jack detection check box. This action completes the AC’97 Audio configuration.
4-2 Troubleshooting

Below is a collection of general asked questions. To check general asked questions based on a specific motherboard model, please log on to GIGABYTE's website.

Question 1: I cannot see some options that were included in previous BIOS after updating BIOS. Why?
Answer: Some advanced options are hidden in new BIOS version. Please press Ctrl and F1 keys after entering BIOS menu and you will be able to see these options.

Questions 2: Why is the light of my keyboard/optical mouse still on after computer shuts down?
Answer: In some boards, a small amount of electricity is kept on standby after computer shuts down and that's why the light is still on.

Question 3: How do I clear CMOS?
Answer: If your board has a Clear CMOS jumper, please refer to the Clear CMOS steps in the manual. If your board doesn't have such jumper, you can take off the on-board battery to leak voltage to clear CMOS. Please refer to the steps below:

Steps:
1. Turn off power.
2. Disconnect the power cord from MB.
3. Take out the battery gently and put it aside for about 1 minute (Or you can use a metal object to connect the positive and negative pins in the battery holder to make them short for 5 seconds).
4. Re-insert the battery to the battery holder.
5. Connect power cord to MB again and turn on power.
6. Press Del to enter BIOS and load Fail-Safe Defaults (or load Optimized Defaults).
7. Save changes and reboot the system.

Question 4: Why do I still get a weak sound after turning up the speaker to the maximum volume?
Answer: Please make sure the speaker you are using is equipped with an internal amplifier. If not, please change another speaker with power/amplifier and try again later.

Question 5: Sometimes I hear different continuous beeps from computer after system boots up. What do these beeps usually stand for?
Answer: The beep codes below may help you identify the possible computer problems. However, they are only for reference purposes. The situations might differ from case to case.

→ AWARD BIOS Beep Codes
1 short: System boots successfully
2 short: CMOS setting error
1 long 1 short: DRAM or M/B error
1 long 2 short: Monitor or display card error
1 long 3 short: Keyboard error
1 long 9 short: BIOS ROM error
Continuous long beeps: DRAM error
Continuous short beeps: Power error
